### Flexible Viewing

Multi-room video gives you the flexibility to access all the sources that are stored in the central media cupboard on any of your main TVs throughout the home. Watch different sources at the same time at different volume levels throughout your home or set all zones to the same source and/or volume to enjoy your media all around your home.

TVs are mounted cleanly on the wall and are able to access your central media equipment such as MySky's, Camera NVR, Apple TV and DVD or Blu-ray player.

### One Control

Control everything from your smartphone and tablet. You may want a dedicated universal remote in conjunction with the SmartLife App for your iPad or Android.

### Installation\*

The **Multi-room Video** package is designed to easily install in an existing home or new build. Wireless components and online configuration tools deliver a customised smart home solution controlled from a single app.

### Upgrade Options

Now you have a Smartlife hub in your home you can add more smart technology and control it all with the same Smartlife App.
