### Integrations

*Google Drive, Slack, Hubspot, Zapier & more.*

### Developer Tools

*Enabling Automation & Customization.*

## What is KAZOO?

KAZOO is 2600Hz's unified communications platform that offers UCaaS, CPaaS, and CCaaS solutions. KAZOO can be completely white labelled and is backed by advanced carrier grade security and reliability. As our flagship product, which is used internationally by telcom resellers, Service Providers and Fortune 500 companies, KAZOO is a true end-to-end solution that offers all of the communication and collaboration tools businesses need to be successful, including a full enterprise-PBX, video conferencing, a next-gen call center, and a wide range of other services. KAZOO's unique multi-tenant architecture is distributed and truly geo-redundant, which creates best-in-class reliability. Designed to scale effortlessly, KAZOO features 300+ open APIs for our partners to build their own integrations and automations, not only enabling them to bring a custom solution to market that fits the needs of the industries and niches they target but also offering them a competitive advantage in those markets.

*KAZOO's completely distributed architecture means nodes are seamlessly redundant to the cluster, so failover is automated and there are no hot backups or database outages to worry about like with traditional architecture.*

## 2600Hz Solutions

KAZOO is deployable worldwide, and can be deployed in 2600Hz data centers or in your own. Depending on your needs and requirements, there is a deployment suite that is right for your business. No matter which deployment solution you choose, you get a completely white labeled and extensible platform tailored to your business needs.

### Hosted Platform

#### *U.S. Hosted Cloud Options*

2600Hz offers KAZOO as a secure hosted service in the US-48. Our triple geo-redundant cloud is run on high performance dedicated servers in Tier 1 datacenters to provide 5x9's uptime and reliability. Carrier services are available through multiple peering & direct connection arrangements with Tier 1 Carriers & Network Providers, so partners are protected from single vendor outages.

### Private Cloud & Global Infrastructure

#### *Dedicated U.S. & International Options*

Deploy KAZOO's geo-redundant, clustered architecture on your own private cloud or inside your own data center. These options let you enjoy complete control over your solution, network, and carrier providers. 2600Hz offers several deployment options and sizes, and installations can be customized to your needs.

### Hosted Platform

Perfect for SMBs such as resellers, MSPs, or anyone else looking for a turnkey unified communication solution without the hassle. With our white labeled interface and easy setup, you can bring a solution to market immediately under your own brand.

### Private Cloud & Private Cloud Plus

Ideal for mid-large Service Providers or Enterprises in the U.S. looking for a private, secure, and fast system. Let 2600Hz manage the servers and uptime so you can deploy quickly and reliably to your users.

### Global Infrastructure

Perfect for clients who prefer to bring their own infrastructure (data center or cloud). Let 2600Hz install, monitor, and support your Cluster 24x7, so you can focus on your end users and not on uptime or cost. Private network and international deployments supported.

“The platform 2600Hz has built provides powerful toolsets to deliver cutting edge, scalable telephony solutions to business of all sizes. KAZOO allows VirtualPBX to deliver unique solutions to the market, faster than traditional technology platforms.”

- Lon Baker, VirtualPBX
