

Sano Health enables healthcare providers to extend their telehealth solution to their most vulnerable patients, bridging the digital divide and leading to better health outcomes

Telehealth is not accessible to many patients due to lack of affordable broadband and adequate devices. Your most vulnerable patients should not be left behind.

Sano bridges the healthcare digital divide with mobile tech

- Affordable mobile devices (smartphone or tablet) bundled with mobile data for telehealth for your patients' use
- Configured to your requirements, and compatible with your existing telehealth solution
- Device locked and restricted. Can only be used as you specify
- Sent to your patients (by you or Sano) fully set up and ready to use
- Simple, easy to use; removes a hurdle to receiving care
- Healthcare provider owns or leases the device
- Device remotely managed by Sano
- Safe and sanitary device fulfillment
- Used by many major healthcare providers throughout the country
- Supports HIPAA compliance

“70% of clinicians cite patient mobile technology challenges as the #1 barrier to telehealth access.”

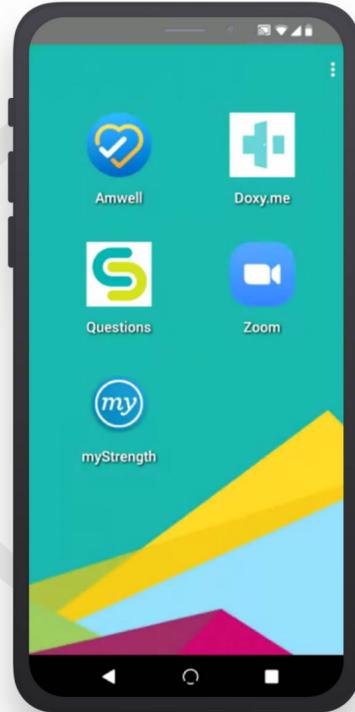

– 2020 COVID-19 Health Coalition study

- Mobile device with your telehealth solution
- Only apps and websites you specify will be authorized
- Device is locked and restricted, but can be modified remotely by Sano
- Device is sent to the patient fully configured and ready to use. No set up needed

- Management, monitoring and reporting capability
- Real-time usage reporting at device level
- Analytics dashboard
- Remote device updating and management by Sano or the client

- Device is “pre-loaded” with sufficient mobile data for multiple telehealth sessions
- More data added as needed
- Access to all major networks (Verizon, AT&T and T-Mobile) as well as regional carriers

- Customized for each client or group of patients
- Live, experienced customer support for client and patients

Improve health outcomes and help bridge the healthcare digital divide.

“Sano Health’s telehealth devices and connectivity enable us to reach out and treat patients who had no other way to use telehealth.”

Dr. Donald T. Erwin, Founder and CEO of St. Thomas Community Health Center in Louisiana

Virtual care is now a major component of healthcare delivery. Your patients should not be left behind
