# **PREOMICS** iST Sample Preparation Kit **8x** Urine

#### Introduction

Sample preparation is one of the essential steps of bottom-up proteomics. The PreOmics iST sample preparation kit is designed to assist researchers achieving best results with few sample preparation steps and little hands-on time. For sample-specific protocols and optimization visit www.preomics.com/downloads or contact info@preomics.com.

## **Kit Contents**

The kit contains everything to perform a complete sample preparation. It includes all chemicals to denature, reduce and alkylate proteins, as well as the enzymes to perform a tryptic digestion and a final peptide cleanup.

| Component  | Сар        | Quantity | <b>Buffer Properties</b> |        |       | S        | Description   | Storage |
|------------|------------|----------|--------------------------|--------|-------|----------|---|---------|
|            |            |          | Organic                  | Acidic | Basic | Volatile |   |         |
| DIGEST     |            | 2x       |                          |        |       |          | Trypsin/LysC mix to digest proteins.                      | -20°C   |
| RESUSPEND  | $\bigcirc$ | 1x 2 mL  |                          |        |       | •        | Reconstitutes lyophilized proteolytic enzymes.            | RT      |
| LYSE       |            | 1x 1 mL  |                          |        | ٠     |          | Denatures, reduces and alkylates proteins.                | RT      |
| STOP       |            | 1x 1 mL  | •                        | •      |       | •        | Stops the enzymatic activity.                             | RT      |
| WASH 0     | $\bigcirc$ | 1x 2 mL  | •                        | •      |       | •        | Cleans peptides from tetrapyrolle contaminants.           | RT      |
| WASH 1     | $\bigcirc$ | 1x 2 mL  | •                        | •      |       | •        | Cleans peptides from hydrophobic contaminants.            | RT      |
| WASH 2     | $\bigcirc$ | 1x 2 mL  |                          | •      |       | •        | Cleans peptides from hydrophilic contaminants.            | RT      |
| ELUTE      |            | 1x 2 mL  | •                        |        | •     | •        | Elutes the peptides from the cartridge.                   | RT      |
| LC-LOAD    | 0          | 1x 1 mL  |                          | •      |       | ٠        | Loads peptides on reversed-phase LC-MS column.            | RT      |
| CARTRIDGE  |            | 8x       |                          |        |       |          | Cartridge for 1 to 100 $\mu g$ protein starting material. | RT      |
| WASTE      |            | 8x       |                          |        |       |          | 2.0 mL tube for collecting waste after washing steps      | . RT    |
| COLLECTION |            | 8x       |                          |        |       |          | 1.5 mL tube for collecting peptides after elution.        | RT      |
| ADAPTER    |            | 8x       |                          |        |       |          | Enables a cartridge to be placed into a tube.             | RT      |

**Pre-Requisites** 

Common lab equipment is required for the sample preparation.

🕑 10 min

| Equipment          | Quantity and Description  |  |  |  |  |  |
|--------------------|---|--|--|--|--|--|
| PIPETTE            | Careful sample handling and pipetting reduces contaminations and improves quantification. |  |  |  |  |  |
| SAMPLE             | 100 mL urine.   |  |  |  |  |  |
| CENTRIFUGAL FILTER | 3kDa protein concentration ultrafiltration system (e.g. Merck Millipore ACS500302).       |  |  |  |  |  |
| HEATING BLOCK      | Two heating blocks are recommended to support protein denaturation and digestion.         |  |  |  |  |  |
| CENTRIFUGE         | 1.5/2.0 mL reaction tube centrifuges are required for loading, washing and elution.       |  |  |  |  |  |
| SONICATOR          | If the sample contains DNA, shear it by sonication (e.g. Diagenode Bioruptor®).           |  |  |  |  |  |
| VACUUM EVAPORATOR  | Vacuum manifolds evaporate volatile buffers from the eluate before LC-MS.                 |  |  |  |  |  |
| ULTRASONIC BATH    | Optional: can be used to resuspend peptides.  |  |  |  |  |  |
|                    |   |  |  |  |  |  |

### Procedure

1. LYSE

Reduce & Alkylate \, 95°C

2. DIGEST

LysC & Trypsin

🕑 60 min

\rm RT

3. PURIFY

Wash & Elute

🕑 60 min

8 37°C

#### Method

#### 1 LYSE

- 1.1. Load 10 mL urine onto a centrifugal filter (not provided) and concentrate to 1 mL. Repeat until 100 mL are loaded.
- 1.2. Concentrate the sample to 100  $\mu$ L and add 900  $\mu$ L LYSE  $\bigcirc$  to your sample. Mix gently.
- 1.3. Concentrate the solution to 50  $\mu$ L, mix thoroughly and transfer the sample to a fresh tube.
- 1.4. Place the sample in a HEATING BLOCK (95°C; 1,000 rpm; 10 min). \*NOTE 1\*
- 1.5. Optional: Spin down droplets (RT; max. 300 rcf; 10 sec).
- 1.6. Use ADAPTER to place CARTRIDGE in WASTE tube. Label all tubes.
- 1.7. Transfer sample to CARTRIDGE and cool down (RT). Be careful not to damage the bottom layer of CARTRIDGE.

#### 2. DIGEST

- 2.1. Add 210 μL **RESUSPEND** to **DIGEST** (1 tube for 4 reactions), shake (RT; 500 rpm; 10 min), pipette up/down.
- 2.2. Add 50 μL DIGEST 🛑 to CARTRIDGE and place it in a pre-heated HEATING BLOCK (37°C; 500 rpm; 1-3 hours).
- 2.3. Add 100 μL STOP To CARTRIDGE (precipitation may occur), shake (RT; 500 rpm; 1 min / pipette up/down). \*SP\*

#### 3. PURIFY

- 3.1. Spin CARTRIDGE in a CENTRIFUGE (3,800 rcf; 1-3 min). If needed, adjust time to ensure complete flow-through.
- 3.2. Add 200  $\mu$ L WASH 0  $\bigcirc$  to CARTRIDGE, repeat step 3.1.
- 3.3. Add 200  $\mu$ L WASH 1  $\bigcirc$  to CARTRIDGE, repeat step 3.1.
- 3.4. Add 200 μL WASH 2 to CARTRIDGE, repeat step 3.1. \*SP\*
- 3.5. Use ADAPTER to place CARTRIDGE in a fresh COLLECTION tube. Label all tubes.
- 3.6. Add 100 μL ELUTE to CARTRIDGE, repeat step 3.5., keep flow-through in COLLECTION tube.
- 3.7. Repeat step 3.5., keep flow-through in the same **COLLECTION** tube.
- 3.8. Discard CARTRIDGE and place COLLECTION tube in a vacuum evaporator (45°C; until completely dry).
- 3.9. Add LC-LOAD  $\bigcirc$  to COLLECTION tube. Aim for 1 g/L concentration (e.g. 100  $\mu$ L to 100  $\mu$ g protein starting material).
- 3.10. Sonicate COLLECTION tube in an ULTRASONIC BATH (5 min) or shake (RT; 500 rpm; 5 min). \*SP\*
- \*NOTE1\* Volumes of buffers can be adjusted according to protein starting amounts. Lysis temperature should be between 60-95°C.

Visit our FAQ website for more information: www.preomics.com/faq.

#### \*SP\* -

Storage Point: At this point, close the peptide containing tube or CARTRIDGE using silicon lid.
Peptides can be frozen at -20°C. Storage of peptides should not exceed two weeks at -20°C.
For extended storage, finish the protocol and store at -80°C.

Please refer to www.preomics.com for our General Terms and Conditions.
