

PAK N SAVE TAKANINI

The Brief...

All Foodstuffs supermarkets have a requirement for hygienic, foodsafe, chemical and heat resistant, slip resistant and durable resin floor finishes to their back of house food preparation areas. We have been installing Nuplex resin flooring in these stores for over 20 years.

The Solution...

Nuplex Sureshield—durable, hygienic, hard wearing, non-slip.

The Installation...

Sureshield was installed to the Butchery, Seafood, Bakery and Deli preparation areas including all chillers and freezers. Coving to upstands was included in all areas.

Differing levels of slip resistant finish are required in each area to suit operational conditions. 535m² of floor area including 320 lineal metres of coving was completed in 6 working days.

The Customer Said...

'Savory Construction Ltd, again contracted European Floor Toppings to supply and install the Sureshield to the Butchery, Seafood, Bakery and Deli Prep floor areas for our latest project Pak n Save Takanini. The total floor area for the contract was 535m₂ with 320 lineal metres of coving.

Due to the extremely tight program imposed on us we need sub-contractors who we could rely on to complete their works package in a timely and defect free manner.

European Floor Toppings have again shown that they are a truly professional group committed to the satisfaction of the client. Thanks to Steve, Shane and the crew for their commitment to our latest Pak n Save development. I would not have any problem recommending European Floor Toppings to anyone needing a prompt, hassle free, reliable epoxy flooring contractor.'
