ScaffFloat™ Advantages

1: Strong & Stable - the significant scaffold structure built into our pontoons makes them incredibly strong, stable and safe platforms to work from.

2: Stability & Structural Calcs - comes with Structural Calculations and a Stability Book produced by a Naval Architect. This includes a range of common load scenarios, limitations for wind and wave height and an easy to understand guide for operators on board.

3: Tough Wood Deck - all pontoons come as standard with a wooden deck suitable for heavy plant and machinery. These are made using standard, or heavy duty scaffold boards supported at 0.5m centres. Our fire-rated deck is suitable for hot works including cutting and welding.

4: Mooring - all pontoons come with heavy duty cleats and mooring lines. Spuds legs are also available.

5: Cost & Pricing - being local we can offer competitive prices for pontoon hire.

6: Build & Launching - the build can take place on a slipway or beach on a single tide, on a riverbank and be slid into the water, or on the quay and be craned in.

7: Very Versatile - we have a wide range of 'Bolt-Ons' that you can add to your hire. Examples include staging, scaffold towers, engine pods & console, moon pool, spud legs, gantry or hiab style crane, loading ramps, A-frame & modular welfare huts.

- ✓ Pontoon Hire
- ✓ Bridge Inspections
- ✓ Events & Festivals
- ✓ Harbour Wall Repairs
- ✓ Ship Repairs & Painting
- ✓ Bridge Access & Repairs
- ✓ River Maintenance
- ✓ Dredging & De-Silting
- ✓ Survey & Sampling
- ✓ Pedestrian Bridges
- ✓ Drilling Platforms
