

Join Ciara. (f/m/d)

As an **engineer** at Ciara, you'll help build the next generation of digital assistant for a modern workforce.

We are looking for curious individuals, that are interested in a broad spectrum of modern technology and want to make an impact from day one.

Our **tech** stack.

Our code consists of several service, no monolith but also no microservices.

Our apps are written in **Typescript**, **ECMAScript 2020**, **Python 3** and **Ruby**. We use whatever is best for the problem we need to solve.

We use frameworks like **Vue.js** and **Rails** and we work test-driven, where it makes sense, with **Jest**, **Rspec** and linters like **ESLint**.

What we offer

- True remote work. Async workflows, few meetings.
- No-bullshit. We focus on minimal overhead / maximal output.
- Self-organized work. No ticket assignments.
- Quality setup (laptop, desk, chair) ordered to your home.
- Diversity.
- Stock options.

What you offer

- Be curious. Be interested in new technologies and a constant learner.
- Know your stuff. Not only the basics, but have real domain knowledge. We don't do code-tests, but we will ask you detailed questions.
- Have a real interest in working at Ciara, this is not just another job.
- Be a good communicator either verbally / or in writing.
- Have experience. Either self-taught or from a previous engagement.
