

Software Engineer - Machine Learning.

As a Software Engineer with focus on Machine Learning you're responsible for the magic under the hood of the Ciara platform. Excite our customers with state-of-the-art voice intelligence functionalities and help build a true AI-based meeting assistant.

Our tech stack.

- ✓ Ruby on Rails
- ✓ Microservices and serverless functions in Typescript and RabbitMQ
- ✓ Vue.js
- ✓ ECMAScript 8 with Babel and packed by Webpack
- ✓ ESLint and rubocop to maintain coding standards
- ✓ For our deep learning and voice analytics experiments we use open source projects like TensorFlow, Keras and Rasa NLU with Python.

What we offer.

- ✓ True remote work: Async workflows, few meetings, flexible working hours.
- ✓ A no-bullshit philosophy: We focus on minimal overhead and maximal output.
- ✓ Self-organized work: Code is pushed to individual branches, reviewed by peers, and instantly pushed to our live systems. Every developer can push code to production and is responsible for it.
- ✓ Quality office setup: convertible desks, good chairs (no IKEA), a dual/three monitor setup, and the newest Apple hardware.
- ✓ Diversity: 50/50 gender balance, 5+ nationalities.
- ✓ Stock options.

What we want from you.

- ✓ Come in with a lot of ideas. Think about Ciara in advance and tell us why you would like to work here.
- ✓ Tell us more about a project you're passionate about. It doesn't matter if this is a board game, coding style, the latest test framework or a new paper plane model.
- ✓ We look for senior developers that have worked in team environments before and released major features to production.

Does that sound like a match?
