

CISO as a Service offering

Cybersecurity threats present significant risks to small and medium businesses, particularly software-as-a-service (SaaS) providers. However, attracting and retaining the right leadership to address this challenge is not financially feasible for many organizations. The shortage of talent along with the level of effort needed (not a full-time job) contributes to the challenge of employing a full-time CISO. The Cybrella Virtual CISO service is designed to address these challenges.

Approach

The Cybrella's Virtual CISO service supports customers to ensure a clear understanding of cybersecurity risks associated with their business and the actions needed to reduce risk. Cybrella provides the governance and leadership required to design the right controls and lead internal personnel and providers to ensure effective implementation.

Onboarding and Transition (Typically a prerequisite for Ongoing Service):

1. Risk assessment
2. Establish security program
3. Remediate gaps
4. Ongoing Service

Strategic

- Semi-annual security review
- Cyber security risk review with board and/or C-level executives
- Regulatory and industry mandate awareness
- Business continuity and disaster recovery
- Security advisory quarterly briefs – awareness; industry shifts; threats; security technologies

Tactical

- Regulatory and industry mandate compliance
- Security Supplier/Provider Management
- Vulnerability Management
- On-demand Requests – active communication, i.e. RFP response; security incident response coordination

Deliverables

**Bi-monthly
status report**

**IT Risk Assessment and
Mitigation Recommendations**
(as directed within fixed effort)

**Security Program
Summary**

Our Team
