

Managed IT Services Nationwide on-site support

Cloud Services

Microsoft Azure Cloud Services

Moving to the Cloud eliminates hardware dependencies and increases redundancy.

If your server(s) is at or near its end of service life it may be that a virtual server is an appropriate next option to consider. With no hardware dependencies in place, the issue of when and how long a hardware failure will disrupt your business becomes a thing of the past.

DocuLedger Help Desk

Avg. annual costs for one IT Specialist:

\$55,094

Help = 1 call & 2 Rings or less

During daily business operations your staff may experience some challenges with technology and this is certainly not where you want their focus to be. From a phone call or an email your staff can get quick, effective, and friendly support so they can be back on to their more work specific tasks at hand. Our helpdesk staff is well trained and experienced in a variety of support issues and when appropriate, specific skill sets can be called upon to solve more unusual circumstances.

All in One Cyber Security Platform

Ransomware and other Cyber threats are on the rise

DocuLedger delivers a full Cyber Security Platform to defend your operations from the latest Cyber threats. We will conduct an initial assessment to determine the vulnerabilities in your operations. Ask for the platform details brochure which includes security awareness training and 24x7x365 continuous security monitoring covering the cloud, network, and endpoint.

Don't risk your operations, products and services with outdated security approaches

Networking & Onsite Infrastructure

Get an on-site IT Assessment

Nationwide coverage for Major Network Upgrade, Network Assessments, Wireless Assessments, Enterprise Deployments, Disaster Recovery Planning, IT Services, Networking & Securities, Cabling. DocuLedger can manage your IT services while you focus on your business. DocuLedger provides a thorough software, network, and mission critical systems needs assessment. From the assessment, a solution is delivered that enables your IT systems to run in the background, and silently insure your business runs smoothly.

Business Continuity & Disaster Recovery

Backup is not enough!

Business Continuity and Disaster Recovery are a first line concern to address so that a major on-site event like fire, flood or natural disaster will not bring your operations to a halt. Our solutions take advantage of cloud platforms, infrastructure, applications, and appliances that bring dependable business continuity to your operations.

We've carefully considered which technology tools bring the most value and dependability to your company and are always evaluating those that are on the horizon.
