

Docu Ledger

Your Cyber Security Platform

www.DocuLedgerCyberSecurityAndIT.com

1: Cybersecurity Health Checkup Assessment

Clarifies current cybersecurity posture and areas for improvement.

2: Self-Learning Email Security

A comprehensive self-learning email security platform for both security teams and employees, designed to quickly detect nefarious emails slipping through traditional anti-phishing defenses, responding to them automatically in seconds, blocking them for good.

3: 24x7x365 Continuous Security

Monitoring covering the cloud, network, and endpoint- A Breach Detection and Response Security Operations Center as a Service

4: Active EDR (Endpoint Detection & Response)

ActiveEDR is delivered via a single agent, single codebase, single console architecture. Going beyond traditional antivirus and EDR solutions, ActiveEDR, powered by proprietary technology, allows security teams to quickly understand the story and root cause behind threat actors and autonomously respond, without any reliance on cloud resources.

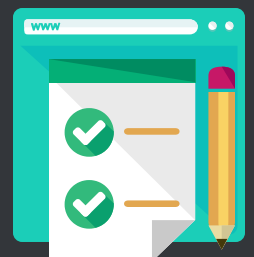

5: Business Grade File Sync & Share

Delivers advanced role-based controls to limit access based on staff's functions. Security is built in to scan files for ransomware and drive policy enforcement like 2 factor authentication.

6: Technology & Data Use Policy Builder

Establishes a simplified document setting workplace expectations and rules to train to.

Your Cyber Security Platform

7: Ethical Hacking

Provides visibility into relevant stories, incidents, and patches. uses human penetration testing and attack simulation to identify weaknesses for review and remediation. * This is an additional per occurrence cost.

8: Network Vulnerability Scanner

identifies issues and exploits with networks for review and remediation.

9: Awareness Training & Videos Learning System

Ensures ongoing employee training and engaging education.

Training Webinars are engaging web-based sessions for educating individuals and groups.

10: Managed Firewall

Provides administration, monitoring and maintenance of firewall infrastructure, policy management, upgrades and patch deployment, and configuration backup.

* Additional cost when activated, but is a per device cost and not a per user cost.

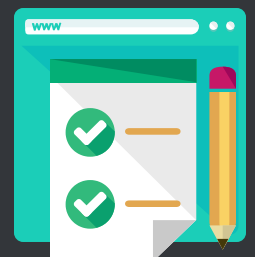

11: Phishing Simulation Tool

Keeps employees on alert with realistic email attacks and point-of-failure training.

12: Website Scanner

Identifies issues and exploits found on public facing websites for review and remediation.

13: Remote Lock, Locate, And Wipe

Protects devices and data in the event of loss, theft, or use in remote locations. It enables you to remotely locate, lock, and wipe devices you manage to prevent data compromise.

14: Incident Response Plan Builder

Establishes a simplified document with steps to take in the case of a breach or incident, including who is responsible.

15: Threats Alert Notification

Provides visibility into relevant stories, incidents, and patches.

16: Awareness Posters Library

Downloadable visual assets remind employees of key tips and topics in print and the physical workspace.

17: Password Management Tool

Do not store passwords in Excel files or sticky notes, or your browser. Use a secure tool that contains a master password. The tool can then automatically log you in to sites using a complex password you don't need to remember.

18: Stolen Password Scanner

Identifies compromised employee credentials so they can be reviewed and reset.
