

How Spyder Auto uses LivMote to Screen Employees in Real-Time

With Josh Johnson, Safety Manager at Spyder Auto

Background

The Spyder Auto Group is a leading provider of aftermarket lighting, tuning and styling automotive parts. Its 140,000 square-foot corporate headquarters is located in the City of Industry, California.

Challenge

As Spyder Auto's Safety Manager, Josh is responsible for making sure all employees go home safely every day. When the COVID-19 pandemic hit, Josh was responsible for selecting a screening device that would facilitate a safe return to work. He started out with a handheld temperature scanner and an online form database that managed responses to screening questions. The scanner had to be operated by an employee, and the readings and form responses needed to be reviewed by management. Josh wanted to further automate this process, but wasn't entirely sure where to start.

Solution

Josh and his team were frustrated by the extra time needed to conduct screenings and document results, so they decided to search for an alternative. "It was kind of a joke at first," says Josh. "We said, 'let's find a temperature sensor -- we know they're, like, \$4,000. We'll do it and see what we come up with.'" Josh found LivMote through CarbonHealth, a LivMote partner currently transforming the healthcare space.

We were looking for something that would notify us when there was an issue, as opposed to having to review data manually for 200+ people.

Results

Since implementing LivMote in July, Josh has been able to focus more on getting back to normal at work. For a time, a large part of his role focused on reopening safely with respect to COVID-19. Now, he has more time to dedicate to industry-specific safety training for Spyder Auto's 180 employees. Currently, Spyder Auto is in the process of implementing LivMote across all of its locations.

The experience has been very good. We like the way the software runs, getting those instant notifications of any issues. Employees love having the ability to screen in themselves, rather than having to fill out a form and submit it to security.

About LivMote

LivMote is a connected hardware device that performs touchless workplace temperature screenings, allowing your business to reopen safely without slowing down. Engineered and designed to deliver a fast, safe, and reliable temperature screening, the check in experience that doesn't involve any touchpoints or another person. LivMote is the only solution that doesn't rely on facial recognition to connect to employee records, with our built-in keycard and access control compatible reader.
