

A NEW “FRONT END” TO YOUR EXISTING POS

Augment legacy POS and extend the life of existing investments

A completely new approach for chains who want to continue to use some aspects of their legacy POS, but desire superior guest experience and a contactless customer journey is to use ZEROCONTACT as a “front end” order management solution that injects orders into the POS.

In this “front end” deployment, the ZEROCONTACT Order Management System improves the total guest experience, and the Legacy POS remains in the background to ensure all of a store’s legacy integrations to HR, inventory, etc. continue without effortful rework.

ZEROCONTACT FRONT END

- ✓ Inject / Sync orders
- ✓ Enhance capabilities of existing legacy POS
- ✓ Adds new contactless and off-prem requirements
- ✓ Provides in-store operations necessary to achieve contactless customer journey
- ✓ Data and orders flow through legacy POS so that reporting, inventory, HR and other integrations continue
