

Shared Technology That Puts People First

At ShareTek, our goal is to effortlessly connect all parties responsible for an individual's care to ensure optimal service and outcomes. Our Coordinated Care platform integrates seamlessly with existing systems, providing a modern, mobile solution for all team members to stay in-sync throughout the client's healthcare journey and deliver personalized, truly coordinated care.

Shared responsibility, capacity and outcomes.

Healthcare, human services and criminal justice entities are routinely resource and capacity constrained, causing high levels of stress while trying to best serve people. Moreover, those working for a shared cause of improved outcomes are often disconnected, with data siloed and access between healthcare and critical system partnerships out of reach. The ShareTek Coordinated Care platform remedies these issues through its capacity-building solutions that ensure vulnerable populations do not fall through the cracks.

92% of clients/members feel more engaged with their support team.

85% of clients/members used the mobile application in the last 30 days.

91% of clients/members feel they have greater access to care when they need it.

Teaming for Optimal Outcomes.

With a single software license to ShareTek's Coordinated Care platform, one provider of a client's healthcare team can invite, via text message, all other providers and support team members to collaborate, create and customize service plans. By using a shared platform to host live meetings, schedule upcoming appointments, assign tasks, and consult on required next steps, every client with healthcare or human service needs can receive comprehensive coordinated care.

How it Works

ShareTek's HIPAA compliant application is the most secure choice on the market and holistically owns all communications and stores them in one easily accessible place. Coordinated care is delivered in real-time using the platform's secure text, audio, and video capabilities, with every action taken or task assigned by a care team member automatically documented. ShareTek's platform connects providers and clients using "ghost" numbers, never revealing the personal cell phone number of those providing care. This secure connectivity helps to close any gaps in the client's healthcare journey and ensures that all progress, potential risks and outcomes are appropriately tracked.

Who We Serve

ShareTek's solutions are designed for struggling clients, members, or patients who need the support of many providers or systems to aid in their recovery, treatment, and effective post-recovery support. Our shared technology links every care team member, system partner and client together in a central, virtual platform. By enabling comprehensive services and supporting a team to deliver coordinated care, we ensure all are invested in the optimal outcomes for every client.

Value Proposition

Do not wait for claims data to measure what is happening. ShareTek tracks the total, type, and outcome of interactions leading to quality engagement and informed spending- in real time!

Prevent unplanned hospital readmissions that cost \$15-20 billion annually. ShareTek saves you money by virtually facilitating follow-up phone calls, home visits, and bridging interventions.

ShareTek's performance-based report card helps track Medicaid Core Measures, providing visibility into how coordinated care is working for the client, providers, and systems. The report card offers real-time alerts to transitions and visibility into barriers, propelling corrective actions sooner rather than later.

Choose ShareTek; Your Satisfaction is Guaranteed!

Get in touch with us, we will get back to you as soon as possible.
