

Beloved internationally for her feminine approach to understanding botanicals in homeopathy, Michal Yakir has combined her knowledge of classical homeopathy and botany with her interest in psychology, anthropology, kabbalism and spirituality to create a system to help homeopaths better understand flowering plants from the perspective of their evolutionary and human development.

In - depth Understanding of Yakir Plant Chart.

Michael Yakir say,

‘Plants are the source of nature’s ability to evolve and develop, and as such can describe human development and assist its progress. Once we assemble every family in the homeopathic Materia Medica – “as if one remedy”, and project it onto the botanical evolutionary axes, then, by interpreting it according to its location in the table – the Materia Medica’s full implication is revealed: like a book that its pages put in order, and a whole story can be read, Like the alphabet acquired meaning when arranged by the spoken word order – so does the Materia Medica, when read according to the developmental order of the plant kingdom, gets more extensive meaning. Not only does it parallel stages of human development and Ego construction, it reveals a continuous historical record of mankind evolution and progress.’

This idea of the Evolution of Plants is very similar to the Periodic Table in the Mineral Kingdom. These ideas are from the work of **Michal Yakir**. She is a Botanist and a homoeopath from Israel. I had an opportunity to learn from her about the evolution of plants and its application in Homoeopathy. Each mineral suggests a developmental point in an individual's life. Similarly, these human issues reflect in the evolutionary stage of development of an individual, even in the Plant Kingdom.

Periodic tables also is a development were spiral of elements from womb to tomb, similarly Plant chart has been systematically classified and based on evolution of plants. The two dimensional Flow chart is arranged systematically in stages of development so it is flow chart from primal photosynthesis[primitive] to developed cells [sophisticated].

Yakir made them in 6 groups[Subclasses] correspondence with a mineral chart. In some ways there is resemblance with the Periodic Table and its rows in a broad way.

The Table refers to the challenges and obstacles met during the developmental journey of the Ego from birth to old age, from a primal stage of union and oneness, to an advanced stage of individuality, while learning and absorbing the lessons of the feminine and the masculine elements.

The table columns describe individuation stages while the rows form maturation levels in the column. This provides physiological, emotional, mental and spiritual content to each family of plants, whereas a single remedy describes only certain variations of the family themes. Every column and row has its identifying themes, and every Order and family in it has also a more specific themes.

Each Column [subclass] corresponds with a particular stage of human evolution.

How individualize u are, how developed you are, and mapping them accordance to their issues, life stories and where they are stuck we can developmentally map the person. It is correspondence, at every stage of evolution.

Evolution is finding the inner developmental age of a person.

One more dimension in this system is going deep inside seeing the sensation and other is see how all plants are connected evolutionary and we can map them. Now we can bead them under one common understanding.

Now we know why magnolia feels lost and Ignatia paralysed. Evolution makes sensation understandable.

As something similar to mineral is also in a plant?

Cal brom like mancinella.

Solanacea like correspondence with snake.

Natrum line is also there in a mammal and correspondence with Nutritional line in plant chart.

The Plant Table is a very practical tool as it explains the traits of groups of plants, of small remedies and of new proving. Cases can be better understood by viewing it thru the table, and the homeopathic prescription improves.

In this 6 hour lecture we will delve into the depths of the table, and by aid of some cases learn of the table basic properties, of the main themes in every column and row, and of some specific Families and Orders (Magnoliales, Nymphaeales and more) – and how to use it in our daily practice.
