Equal Opportunity Employer

Solar Watt Solutions is an equal-opportunity employer. For all positions, we recruit, hire, train and promote individuals regardless of race, color, religion, sex, national origin or ancestry, sexual orientation, age, disability, or covered veteran status, or other factors identified and protected by federal, state and local laws.

Products & Services:

Solar Panel Installation & Savings

At Solar Watt Solutions, we offer a wide variety of residential solar solutions.

We work closely with our clients every step of the way to deliver the best value for their individual needs and solar energy investment.

Our residential solar solutions are not “cookie cutter” systems. We do not install in a “one size fits all” fashion. We offer free on-site evaluations to help our residential clients determine which system is best for their homes.

CoolPV - Integrated Electricity and Pool System

Electricity and Heated Water from the Sun!

CoolPV™ provides Improved PV Electrical Output with Energy to Heat Your Water or Your Pool at the same time!

The Unique Design Provides Unmatched Performance and Maximum Energy Output using the same Roof Space.

Electric Vehicle

Electric Cars

Electric vehicles are a great match with solar systems. When set up properly most of our customers get to drive their electric vehicle for free. We can install EV chargers with our systems or if you already have solar, we also install stand-alone EV chargers.

Solar Battery

You gain more independence from the utility company: A battery lets you have power when the grid goes down. You control when you need to get electricity from the grid. Further lowering your cost. Use the electricity that you make.

About Us:

We are a Solar Technology Industry Leader and System Integrator

We pride ourselves on partnering with companies who are leaders and innovators in the solar energy field to design and install Green energy solutions that give our residential and commercial clients the power to save money and help preserve the environment.

Because we are a system integrator, we are not a supplier or maker of one brand of solar technology. Instead, we assist our clients in finding the energy products that best fit their needs and budget no matter which manufacturer produces the equipment. Therefore, we can provide you with the best, most cost-effective solutions for your individual residential or commercial project.

What Are The Benefits Of Solar Energy?

Tens of thousands of people across the United States have already decided that solar energy is the best option to save money on energy bills and rid themselves of dependence on public utilities and increasing energy costs. However, you may still be unsure of the benefits.

When you or your company invest in a solar energy solution, you will enjoy the following benefits:

Produce your own energy, don't rely on utilities. Customers who still rely on the public utilities to provide their electricity pay rates that have increased, on average, nearly 7 percent over the past 20 years. How long can you afford to keep paying more?

Solar power is less expensive than utility-supplied electricity. It's cheaper to produce your own energy than to continue paying for the power from a utility, the cost per unit of energy you produce. And as utilities continue to increase their rates, the amount of savings from your solar energy system will only increase.

Governmental rebates make solar energy more affordable than ever. Local governments across the U.S. offer rebates and other financial incentives to individuals and businesses who Go Green with solar energy systems. In some cases, these rebates can pay for more than 80 percent of the total cost of a system.

Solar power benefits the environment. It's no secret that producing your own electricity with a solar power system puts less of a strain on the environment than purchasing electricity from a public utility. Generating electricity from fossil fuels increases greenhouse gas emissions. Our customers can take pride in knowing that they are part of the solution, not the problem.
