Smart Collections

A Smart Service from CCL:
Clever solutions to everyday data challenges

Our Smart Collections service has been designed to give organisations every benefit when it comes to data extraction work:

- **Rapid response**
- **Forensic quality**
- **Ultra-fast imaging**
- **Flexing to any scope or scale**
- **Minimised business disruption**
- **Total cost certainty**

It is a great choice for law firms, in-house legal, corporate investigation teams, eDiscovery providers, indeed any organisation that needs expert assistance with acquiring data quickly, defensibly and cost-effectively for subsequent investigation / interrogation / review.

Advantages for clients:

- One of Europe's largest digital forensics teams, built on the highest evidential handling standards demanded by our strong law enforcement background
- Impressive scope and capacity, with operatives on stand-by ready to deploy globally for anything from a simple collection to complex targeted data retrieval
- Dual trained personnel across PC and mobile for a more streamlined, discreet response, capable of imaging multiple devices simultaneously
- Intelligent frontline triage of devices, reducing the volumes needing full imaging
- Unrivalled on-site imaging speeds, with the world's most advanced frontline technology, SPEKTOR, able to image up to 10x quicker on average than traditional tools
- Easy access to the full suite of CCL services and consultancy for downstream assistance or more bespoke projects

Deliverables:

Our collections clients can expect:

- Scoping call with senior collections analyst the same or next day
- Scoping and quotation – fixed price promise
- On-site deployment and/or remote collection within < 48 hours
- Complete self-sufficiency for handling all device and data types, with contemporaneous record keeping throughout
- Copy of data returned to client for retention
- Flexible add-ons: Processing and investigative analysis; end-to-end eDiscovery

Smart Collections

Our process explained

Requirement to collect data

CCL and client scope the collection requirements and identify collection method and toolset. This could include:

- Full forensic images of devices
- Mobile device extraction
- Collection of data from cloud sources
- Retrieval of data from complex servers, databases or networks
- Live acquisitions of data from running systems
- Acquiring volatile memory from running computers

Client instructs CCL to collect data

CCL deploy experienced analysts to on-site location with equipment and software suitable for all your collection requirements. Alternatively, CCL are provided with the necessary access and credentials to collect the data remotely

CCL conducts collection

Collection is carried out by CCL using forensic software. Comporaneous notes and photographs are compiled throughout the process

Copy of data is returned to client for retention or analysed further by CCL

CCL can provide a copy of the collected data to the client for future use, securely store the data within our evidence stores or conduct further analysis in line with client requirements

CCL Solutions Group is one of Europe's leading digital forensics, data investigation and eDiscovery specialists.

Our suite of Smart Services has been designed to help clients tackle a wide range of data-oriented challenges efficiently and effectively. They provide a standard, robust solution every time, with complete price certainty from the outset.
