

Project Pitch

Back Story

I ordered pizza one night and I was very confused about what to watch on Netflix. I was browsing through but couldn't find the perfect show.

Soon I realized that the pizza I ordered was finished and all my time was wasted in browsing through so many options. What a bummer!

The Problem

I believe there are many like me (*still need to do research*) who watch something while having their meal. Right now, there are SO MANY options on Netflix that might confuse the viewers.

This not only wastes the time of the viewers but also spoils the fun of eating a meal.

The Opportunity

What if there is a website that will pick up shows from Netflix based on what the viewer is eating!

Why This Opportunity?

1. Currently, users visit Reddit, 9GAG, and IMDB to make a list of top movies. But these movies are based on ratings, comments, and reviews. As of now, no system could suggest a movie based on the meal.

Why This Opportunity?

1. Currently, users visit Reddit, 9GAG, and IMDB to make a list of top movies. But these movies are based on ratings, comments, and reviews. As of now, no system could suggest a movie based on the meal.
2. Plus, the viewers will spend less time browsing through movies and more time enjoying their meal.

How Could It Work?

1. The users will fill in the meal they are eating. This could help to suggest the most accurate movies. *(There will be a lot of research involved in this to understand what emotions do people relate to food!)*

How Could It Work?

1. The users will fill in the meal they are eating. This could help to suggest the most accurate movies. *(There will be a lot of research involved in this to understand what emotions do people relate to food!)*
2. Second, they will have to fill in the number of people viewing. Suppose two people are eating and viewing then the website would suggest shows based on less viewing time, and if one person is eating and viewing then it would suggest movies of longer running time. *(Since it would take one person more time to eat than two people).*

How Could It Work?

1. The users will fill in the meal they are eating. This could help to suggest the most accurate movies. *(There will be a lot of research involved in this to understand what emotions do people relate to food!)*
2. Second, they will have to fill in the number of people viewing. Suppose two people are eating and viewing then the website would suggest shows based on less viewing time, and if one person is eating and viewing then it would suggest movies of longer running time. *(Since it would take one person more time to eat than two people).*
3. The movies will be suggested based on the above two steps, but the user could still filter movies as per rating, most viewed, etc.

The Problems I Could Face

1. Not knowing the right process for the research or the research phase being too long!

The Problems I Could Face

1. Not knowing the right process for the research or the research phase being too long!
2. For suggesting movies based on food, I believe the movies should be watched by humans and then categorized accordingly. Which could take a long time as there are way too many movies!

The Problems I Could Face

1. Not knowing the right process for the research or the research phase being too long!
2. For suggesting movies based on food, I believe the movies should be watched by humans and then categorized accordingly. Which could take a long time as there are way too many movies!
3. Keeping myself motivated for the project and making it a real-life website

How Could You Help

1. I know I am asking for too much of your time but if this project interests you, it would be great if you could help me anyhow!

How Could You Help

1. I know I am asking for too much of your time but if this project interests you, it would be great if you could help me anyhow!
2. Maybe you could also be the mentor to me for this project, it would be a great help to do this under your guidance.

How Could You Help

1. I know I am asking for too much of your time but if this project interests you, it would be great if you could help me anyhow!
2. Maybe you could also be the mentor to me for this project, it would be a great help to do this under your guidance.
3. If not a mentor, maybe you could provide me with some resources or connections that I could seek help from.

Thank You
