

Content Management System

Retail engagement marketing is always adapting. To assist you with quick pivots or strategic promotions, our cloud-based content management system allows you to have control over your content in one centralized space. Update messaging in real-time, A/B Test, or schedule your next campaign launch across hundreds of locations at the exact same time.

Platform Features

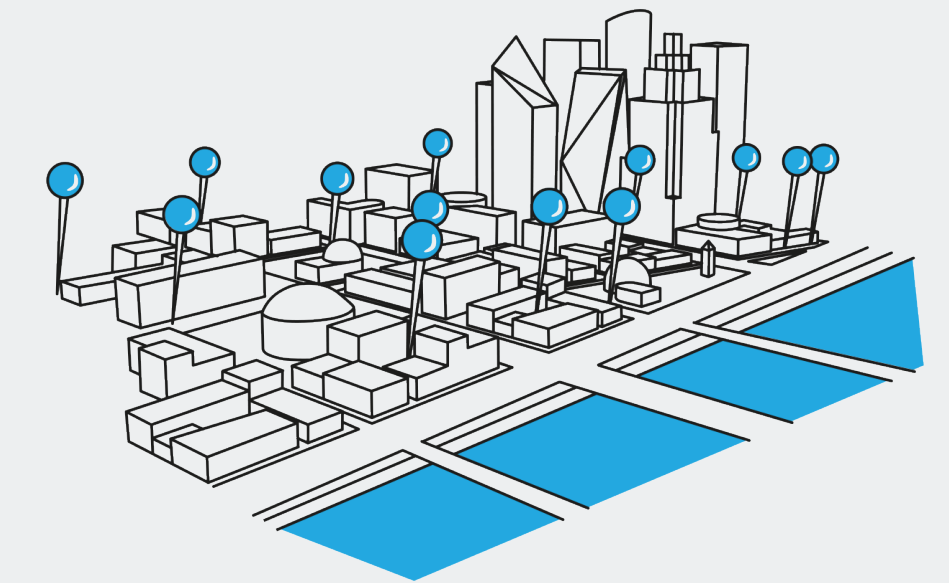

Intuitive User Interface

Simple drag and drop tools allow you to quickly update media across your displays. Our smart scheduler allows for dayparts, A/B testing and campaign scheduling weeks or months in advance.

Multi-Tenancy Architecture

We give you the freedom to create an unlimited number of users and specify their level of access. This is great for corporate structures with franchises or agency partners that require restricted, monitored access.

Bulk Deployment

Compliance in retail can be a real headache. Our bulk deployment feature allows you and your team to change messaging across your entire portfolio of stores, from one centralized location.
