

SITE SURVEY

What should be expected with a Site Survey? A painless process.

A Site Survey is a simple assessment of the space where a Glass-Media system will soon be installed. A Glass-Media technician will contact the store manager and schedule an on-site visit to take measurements and pictures of the proposed space. Managers' only expectations are to coordinate the visit and ensure that the survey area is clear.

PROCESS

VERIFY LOCATIONS

First, we'll work with stakeholders to confirm the address and contact info for each location slated to receive a Glass-Media solution.

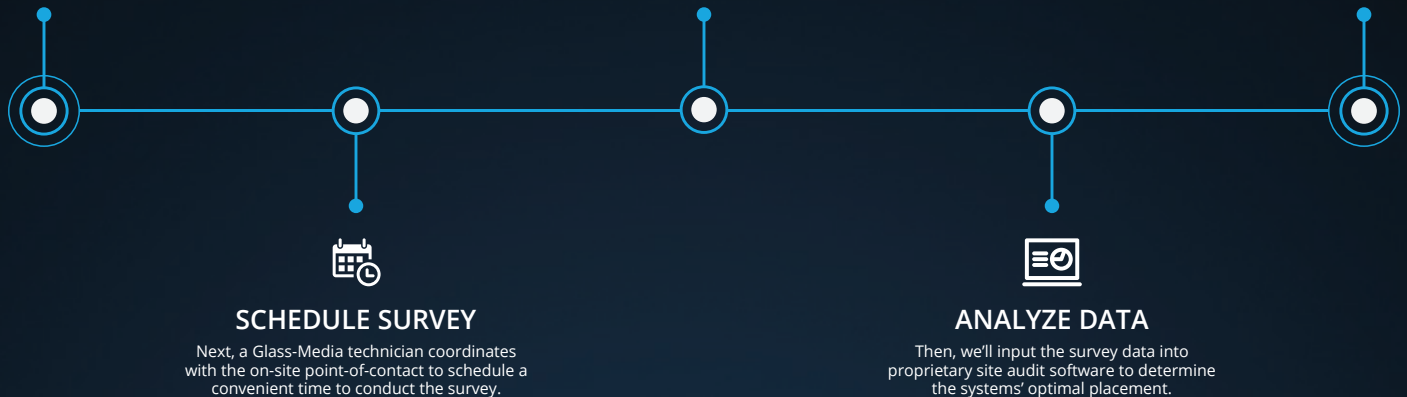

ASSESS THE SPACE

Once on-site, the technician records key details about the environment's build-out, dimensions and surfaces. Expect 30-45 mins.

ADVISE AND IMPLEMENT

Last, our team will present system recommendations and an implementation strategy for each location. It's go time!

SCHEDULE SURVEY

Next, a Glass-Media technician coordinates with the on-site point-of-contact to schedule a convenient time to conduct the survey.

ANALYZE DATA

Then, we'll input the survey data into proprietary site audit software to determine the systems' optimal placement.
