RESTOR YOUR VIGOR WITH PLANT TISSUE CULTURE

The Benefits of Regenerate & Preserve

Pathogen management is a key risk factor that every grower faces, even in the most carefully tended cultivation facilities. As cannabis markets mature and cultivation operations scale up, pathogen management will become increasingly urgent. In mature cannabis markets like California, cultivators have seen pathogens sweep from one facility to the next, in some cases leaving operators with few options for sourcing clean starting material.

Segra's Regenerate and Preserve program offers your best line of defense against disease—but it is actually an offensive maneuver. By starting now, before you see any changes, you can ward off future problems. Clippings from your plants are initiated into tissue culture, where we can isolate any pathogens that might already be present, and strip them away from the genetic material, restoring your plant to its original vigor and then preserving it indefinitely for your exclusive future use. No matter what happens within the walls of your

greenhouse, you will have quick access to as many healthy plantlets as you need.

Think of Regenerate and Preserve as your insurance policy. It leaves you with continuous and consistent grow—no matter what. Protect your valuable IP, avoid degradation, and sustain value in your genetics. Get started with R&P now at a cost that is lower than you might be expecting.

LIMITED TIME OFFER

Until November 30th, new Regenerate and Preserve orders are eligible to receive **10 free plantlets for every cultivar processed**, so you can see the results of PTC in your grow immediately.

Reinvigorate Your Mother Stock

Mother stock faces natural diminishments over time, but you shouldn't settle for diminished results. Let Segra provide you with clean, vigorous tissue culture plantlets to use as mother plants.

Our Mother Stock Program allows you to choose from a full range of Segra's public collections or choose your own genetics to provide you with an ongoing supply of **new, reinvigorated, disease-free** mother plants. Why not focus your resources more sustainably on growing productive plants instead of on nursing mothers, and reap many of the benefits of TC at the same time.

Rejuvenate your mother stock today, starting at \$100 per mother plantlet license with unlimited cuttings.
