Saiva System

Introduction

Saiva System is a leading global recruiting firm committed to enhancing organisational productivity with its impeccable staffing services. We understand that the stepping stone to any successful organisation is its quality staff. Therefore, by combining innovative technology and expert skills, we hire the right candidate for maximum organisational productivity and efficiency. The company partners with leading businesses, governments, non-governmental organisations to bring excellence to the table. The recruitment process, however, only begins after streamlining your business objectives. Our industry-specific expertise with both short-term and long-term agreements will take your organisation to unprecedented heights.

Permanent Recruitment

Saiva System partners with organisations of all scales and sizes, to help clients find permanent solutions for their organisation—from executives to C-levels. We first filter through a huge database of recruits looking for permanent employment and then conduct a segment-specific approach to invite potential candidates. With an active

database of millions of candidates, online sources, and an extensive network of contacts established over the years, the company strives to offer the best-fit talent for all your unique business requirements.

Contract To Hire

As a global recruiting and IT staffing firm, we also offer contract-to-hire services to help organisations meet specific project requirements. Contractual services, an intermediate staffing solution, allow organisations to monitor employee performance before making a permanent employment offer. In order to find suitable candidates for the contractual job position, it is imperative to first understand the company's culture and objectives. This helps us in finding talented recruits who will qualify both existing and long term workforce goals.

Recruitment Process Outsourcing

To make the recruitment process efficient, we offer highly customised recruitment solutions. As part of our Recruitment Process Outsourcing (RPO), we provide recruitment process solutions to formulate a hiring process specifically designed for your company's business model. The technologically driven RPO solutions are backed by data analysis, market expertise and supreme industry experience. Saiva System works as an integral system and collaborates with the best across industries to find the most deserving candidates for your organisation.

Talent Acquisition

At Saiva System, we help companies hire an ideal fit for the organisation, and not fill a vacant position. With a highly professional and intelligent talent acquisition process, we are committed to find ideal candidates, who aim for both individual and organisational growth. To help companies procure talent in the increasingly competitive environment, we offer a data-driven, structured, and collaborative talent acquisition process.

Headhunting

A highly strategic recruitment process is crucial to building a competitive workforce. The Saiva System has a team of professionals who are skilled to identify suitable candidates for all kinds of job roles. Finding deserving candidates for senior positions

within a stipulated time window can be challenging in this highly competitive environment. Our proactive strategies and a massive global reach make the headhunting process faster, targeted and efficient. By closely assessing the business culture and hiring needs in advance, we stay way ahead in the recruitment process.

Contract Staffing

Contractual Staffing has become a popular recruitment model in recent times. Working on contractual personnel arrangements give both employers and employees the flexibility in their work profiles. Contractual staffing makes companies agile to the evolving market requirements and helps them ramp up project teams with incredible recruits who excel at handling short-term projects. At Savia System, we utilise the most sophisticated and extensive networks of professional contacts and resources to identify the most compatible short-term talents for your company.
