

## EVERYSENS OBTAINS THE TRUXT LABEL AWARDED BY EXÆGIS

**EverySens**, which specialises in the digitalisation of transport flows, announced today that it has been awarded the **Truxt** label with a **b1 rating**, the only European label that guarantees the **operational capacity** and **financial sustainability** of IT service providers to their clients and partners.

Following a very demanding audit which compared EverySens to the best practices on the market, the company was awarded this distinction for entrepreneurial quality, based on a reference system developed by Exægis consultants.

Thanks to this best of art evaluation and labelling model, Exægis offers its partners (lessors, equipment and solution leasers) the possibility of benchmarking suppliers and subcontractors (VARs, SSII, business editors) according to a multi-criteria evaluation grid. The **Truxt** label is based on a **financial analysis of the company** as well as an **operational analysis** - 100 points of attention - carried out via an on-site audit.

This assessment is the basis for the framework of service contract performance risks and the guarantee of their continuity to which Exægis commits to lessors and lessees.

As a true "rating" agency for operational players in IT services in "as a service", "subscriber" or "fee" mode, **Exægis thus gives EverySens the opportunity to gain unparalleled recognition on the market**: this should help it to **distinguish** itself in the long term within **its own competitive universe**.

### ABOUT EVERYSENS

EverySens offers the first Transport & Visibility Management System (TVMS) natively integrating visibility to logistics processes to plan, track and optimize all supply chain flows in real time. EverySens harnesses the power of digital twin and AI technologies to boost industrial logistics performance. The mix of processes and visibility allows for continuous planning coupled to execution and fleet data, better multi-party collaboration, and automatization of transport processes.
