

FROM START-UP TO SCALE-UP: FRENCH LOGISTICS SOFTWARE PUBLISHER EVERYSENS TOPS THE EUROPEAN RANKINGS

The world of logistics has evolved very rapidly: in this context, Supply Chain Media, publisher of Supply Chain Movement magazine, has launched the second edition of the European supply chain startup competition, and unveils the matrix of the best European logistics startups and scale-ups.

This year's matrix brings together rising supply chain startups from 10 different categories of logistics solutions and their level of maturity. It includes companies offering solutions for various areas of logistics, including ocean freight, inventory management, temporary storage and logistics visibility.

For the second time in a row, Everydens remains the only French company among the European leaders in logistics visibility. After a year rich in developments in 2018, Everydens' multimodal logistics visibility solution has gained in maturity, and is therefore positioned at the top of the "Supply Chain Visibility" ranking for the 1st half of 2019.

"New technologies are opening up logistics opportunities for manufacturers. When I created Everydens, I wanted to make this company a pioneer of innovation in this sector that is structuring our economy. We have succeeded: in 3 years, we have pushed back the limits of visibility. Our predictive platform pierces the black box that was industrial logistics, to make it more transparent every day" explains **Dr. Youness Lemrabet, CEO of Everydens.**

With the success of last year's InNOWvate, - more than 250 professionals attracted - Supply Chain Media is repeating the event and organising the second InNOWvate competition on 22 May 2019, in the Netherlands, to announce the top 10 best logistics players of the year. Everydens will be present for the occasion.

ABOUT EVERYSENS

Everydens offers the first Transport & Visibility Management System (TVMS) natively integrating visibility to logistics processes to plan, track and optimize all supply chain flows in real time. Everydens harnesses the power of digital twin and AI technologies to boost industrial logistics performance. The mix of processes and visibility allows for continuous planning coupled to execution and fleet data, better multi-party collaboration, and automatization of transport processes.
