

# BUILT BY CLINICIANS, FOR CLINICIANS, TO IMPROVE PATIENT OUTCOMES THROUGH EVIDENCE.

Available Exclusively on the Apple Store

Compatible with iOS 10+

inCytes

Version 2.0

# OVERVIEW

inCytes is a user-friendly mobile application which allows a clinician to assess and report upon their patient's progress. Users determine the observations and assessments relevant to specific cohorts, and patients respond remotely from their own devices. Immediately following their response, patients receive engaging progress reports, containing results, benchmarks, and educational modules.

## KEY FEATURES

Design Your Own Surveys

Engaging Patient Progress Reports

Automated Follow Ups

Device Agnostic for Patients

Multi-Lingual Compatibility

Own Your Data

We use inCytes to design and capture unique clinical evidence for every regenerative medicine procedure we deliver.

It's intuitive, patient-friendly and is driving our evidence-based initiatives for 2019 and beyond.

**Laura de Girolamo**

Director of the Regenerative Galeazzi Institute (RE.GA.IN.)

# HOW IT WORKS

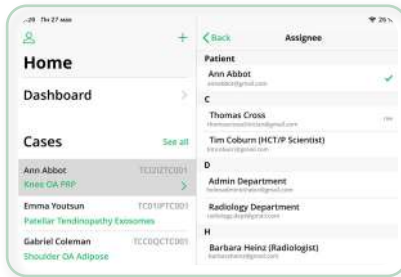

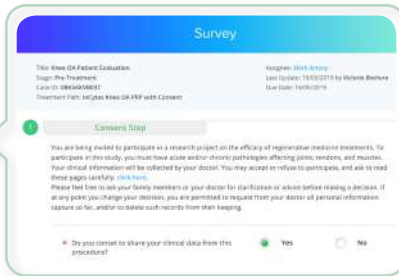

## DESIGN

Find Community Sourced, or design your own, custom clinical queries to correlate against patient outcomes.

## ENROLL

Enroll patients in a matter of seconds, and receive their e-consent and baseline measurements before coming to the clinic for treatment.

## MONITOR

Multi-lingual standard assessments are automatically sent to your patients' own mobile and desktop devices on the designated follow up periods.

## PROGRESS

Survey completion yields an immediate progress report, providing patients with engaging results, benchmarks, and custom educational modules.

## IMPROVE

Download your evidence to excel, where you can isolate, analyze and determine predictors to positive outcomes.

## OUR PRICING

**\$35**

Per User, Per Month

+

**\$5**

Per New Case

**Try it for 30 Days**

Standard Treatment Paths included.  
Custom \$250 per.
