

# Wreath Instructions

- The black piece is your base (I used 110lb paper), the hearts (I used 65lb paper) are grouped together in sets of 5. The XO's (I used glitter card stock) are grouped together but can be changed to individual pieces.
- start by ungrouping your SVG file in your design space. You are going to change all of the lines that are grouped together layered above the hearts. They should be changed to score lines. You will reattach these back to the heart pieces.
- Make sure if you resize everything is grouped together again. If it isn't you will have off sized pieces that don't match up.
- Once you have everything cut out you will fold on the score lines. Then glue 5 heart pieces together but do not connect all the way around, leave the end pieces unglued so they can lay flat.
- Once you have your hearts built you can arrange on your wreath as you'd like.
- If you have any questions please email me at [dinosaurmamasvg@gmail.com](mailto:dinosaurmamasvg@gmail.com) - message me on instagram @dinosaurmamasvg or send me an Etsy message. I will respond within 24 hours.
