DevOps Transformation at Centare

Unlock the full potential of your development and operations organizations with our DevOps Transformation services.

Leaders charged with developing a comprehensive DevOps strategy are overburdened with their day-to-day duties and underprepared in the nuances of modern DevOps practices, resulting in confusion, missed opportunities, and costly setbacks. We are experienced in helping companies increase operational efficiency by unifying their development and operations teams.

Advantages

Understanding the benefits of DevOps is easy; bringing change to your organization is not. Centare's DevOps Transformation program adapts to fit your unique situation - no matter where you are on your DevOps journey.

- The DevOps Rapid Start process quickly assesses and launches DevOps into your organization

- Build your processes and infrastructure on a foundation of industry-accepted best practices

- Create lasting change by forming a community of DevOps practitioners

Our Approach

Discover: We create a detailed analysis of the present state of IT teams, DevOps capabilities, tools, and processes in place. The results charter a high-level roadmap, blending a customized approach with the Centare DevOps Transformation Framework.

Build: Our DevOps engineers work with your team to build a product consisting of enablers and guardrails that serve as a self-service platform for your development teams to accelerate their DevOps journey.

Pilot: Our cross-disciplinary team takes ownership with you, collaborating with team members to quickly establish buy-in with executives using our "boots on the ground" approach. This is an effective, low-cost way to test the DevOps initiative - turning strategic goals into tactical actions.

Scale: Trained and experienced Centare engineers embed in your enablement and product teams to reinforce the initiative, achieve short-term wins, and gain long-lasting results.

Accelerate: Avoid slipping back into old habits and create lasting change with our proven community-building techniques.

Discover > Build > Pilot > Scale > Accelerate
