

## App Modernization at Centare

Our pragmatic approach combines best practices with cutting edge technology to renew your legacy applications and give them a new life.

Your legacy applications are valuable. We excel at making applications easier to change, cheaper to run, and updating them with cutting-edge features. Instead of waiting months or years for a rewrite, we will work with your organization to upgrade your legacy applications by creating a comprehensive modernization plan tailored to your specific needs.

### Advantages

- Extend the life of legacy applications without the need of a full rewrite
- Gradually upgrade an application without losing business capabilities
- Decrease the lead time for new features
- Reduce hosting and maintenance costs
- Improve your customers' experience

### Our Approach

We begin by learning about your business strategy and goals, completing a technical evaluation to holistically understand what is working well and what needs improvement. We'll work with you to develop a retrofit roadmap and a modernization plan to iteratively implement that roadmap, quickly delivering value.

App Modernization includes:

#### Strategy + Evaluation

- Architecture Evaluation
- Database
- Backend
- Frontend
- Infrastructure
- Architecture Roadmapping
- Security Evaluation
- Cloud Migration Planning
- Code analysis
- Automated Testing Evaluation

#### Engineering

- Software Development
- Application Security Hardening
- Training
- DevOps
- API Enablement
- QA Automation

#### Visual + UX Design

- Accessibility Review
- Usability Review
- UI Redesign
