Introduction

With the release of Connect and the new ability to present a mobile number when calling from a Horizon fixed device or soft client or a fixed number when calling from your mobile it's become necessary to add clarity between a fixed and mobile number so a few minor changes are being introduced to the Horizon GUI naming conventions to facilitate fixed and mobile services working in conjunction with each other.

On the evening of the 22nd November 2017 we will be introducing the below improvements to a user's number presentation options on the GUI.

Presentation Number Changes

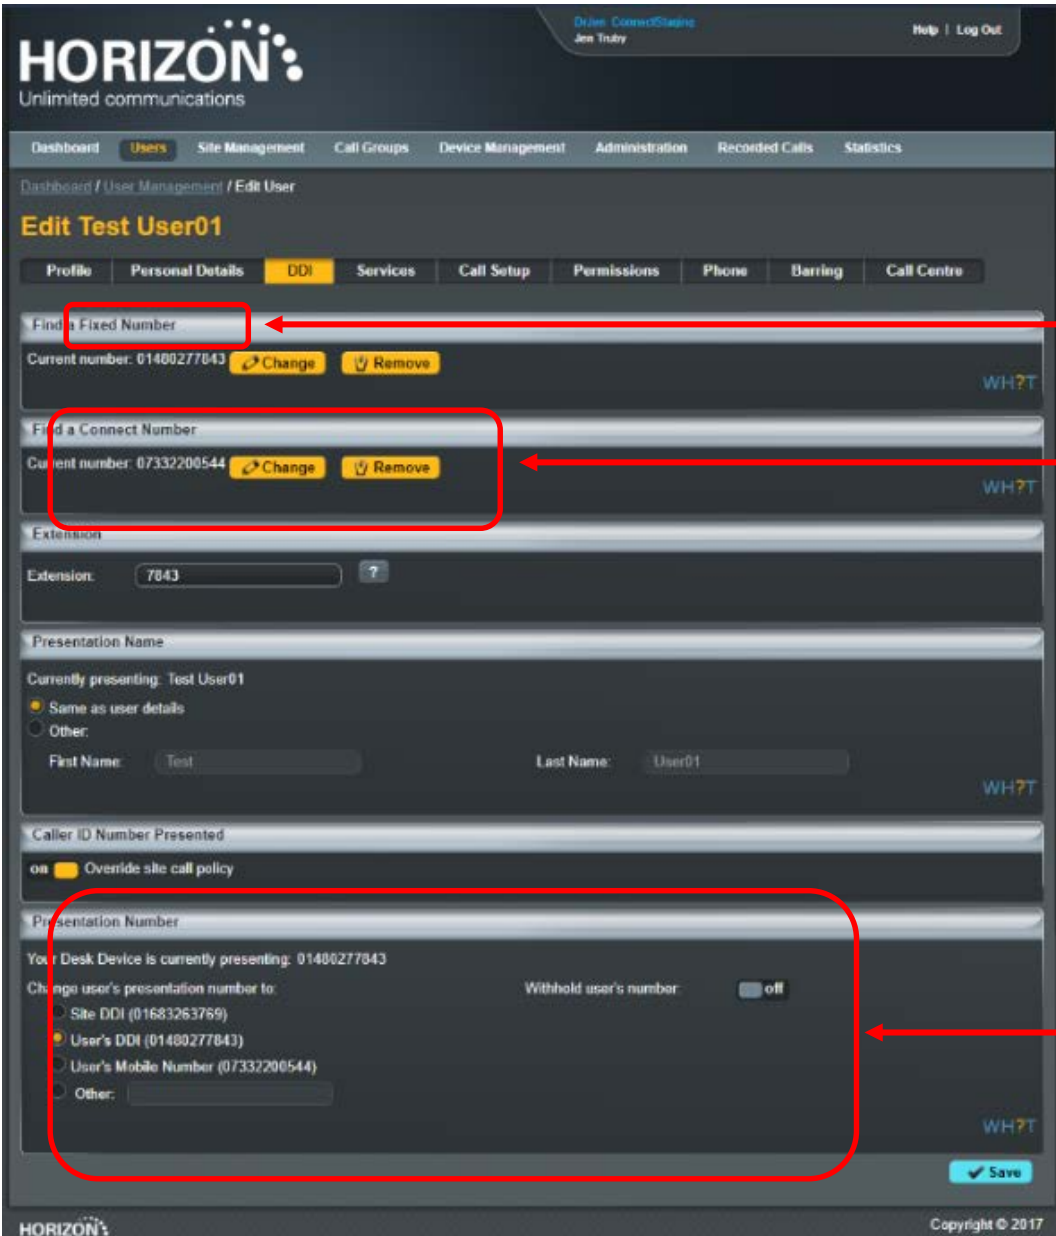

On the User > DDI tab of the GUI the presentation options have appeared as below when the override site call policy was enabled.

The screenshot shows the 'Edit Richard James' interface with the 'DDI' tab selected. The 'Find a Number' section displays the current number '01618703374' with 'Change' and 'Remove' buttons. The 'Extension' field contains '3354'. The 'Caller ID Presented' section is set to 'Same as user details'. The 'Caller ID Number Presented' section has 'Override site call policy' set to 'on' (highlighted in red), with radio buttons for 'User phone number' (selected) and 'Site phone number'. The 'Number Presentation' section shows 'Active' status and a 'Deactivate' button, with a 'Phone Number' field containing '03332403354'. A 'Save' button is at the bottom right.

We have taken the opportunity to improve the information presented and add clarity between the users fixed and Connect mobile number.

The changes are encircled in red but in summary the presentation options and numbers are now provided along with the option to allocate a mobile number when the Connect subscription option is added to a user.

Clarity added to the number type

Section added to select and add a Connect Number.

NB Only appears when the Connect bolt on option is added to the user

When Override site call policy is enabled all the presentation options, along with the number associated to the option will be displayed
