Horizon Release Note

12th January 2017

Contents

Introduction

On the evening of the 12th January 2017 we will be implementing the following resolutions to known issues and behaviours.

Known Behaviour Resolution

On the evening of the 12th January we will be applying the following fixes to known behaviours

If the name of the contact to be returned contained a "&" character then the Alpha Tagging would not display the name of the contact for the user. The name will now display.

If the same Personal Directory Contact (Same Name and Number) is set via 2 different users, then only one of the users will have access to the contact. Both users will now have the Contact available in the Personal Directory.

The LDAP directory was not updating immediately whenever a change was made to a Horizon users DDI on the GUI. This resulted in the alpha tagging failing on inbound calls as the correct user DDI is required for an LDAP lookup. The LDAP directory now updates immediately after a change to a user's DDI.

Regards

Roy Farrow
