

Welcome to RGB Landscapes

RGB Landscapes are a leading independent supplier of natural stone and landscaping stone. From our base in Nottingham, we work nationwide, offering our unique range of high-quality stone and architectural products to numerous projects and builds.

On top of our extensive range of natural stone and impressive production capability, our clients also benefit from our team's experience and expertise. If you're not sure how you would like natural stone to be implemented in your project, don't worry, our team will provide a comprehensive service from start to finish, offering everything from assistance with material selection and value engineering to logistics management and site support. You provide a budget and deadline - and we will generate a solution.

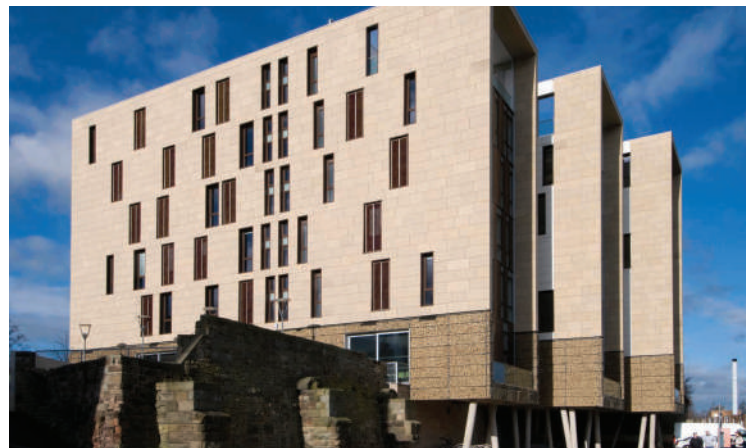

Production Capability

Since our inception, we've worked tirelessly to develop our production capability and expand our repertoire of architectural masonry products.

Today, thanks to a strong team, ample raw materials, and specialist machinery, we are able to easily meet the diverse needs of our clients and engineer a solution which works for them.

To take advantage of RGB's dedicated workshop and manufacturing potential, get in touch today and we will start bringing your ideas to life.

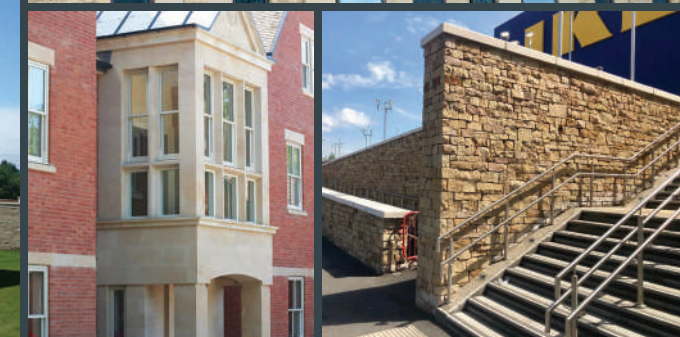

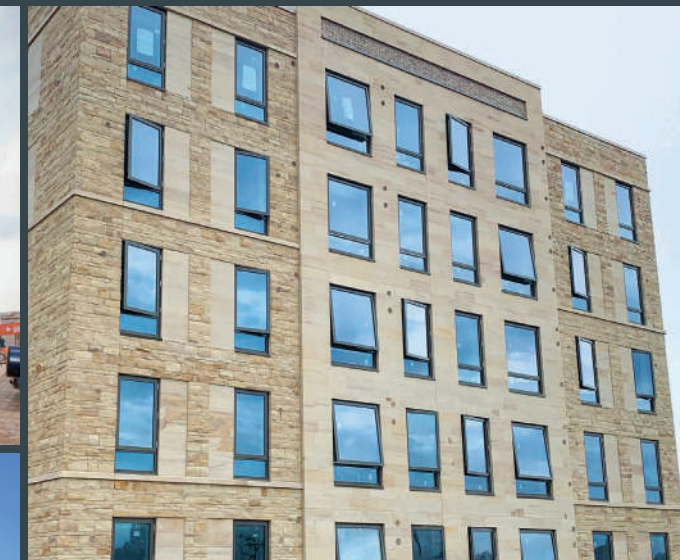

UK Stone

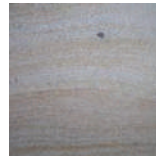

Here at RGB Landscapes, we have access to a wide range of premium materials from across the UK, allowing us to provide high-quality natural stone of all types, from our own Yorkstone paving and granite to the country's leading sandstone and limestone.

To help you find the right stone for your application, we will work with you closely throughout each stage of the project, offering help and advice where necessary.

With decades of experience in project management and the supply of architectural stone, you can trust the team at RGB.

Award-Winning Projects

Mouselow Yorkstone

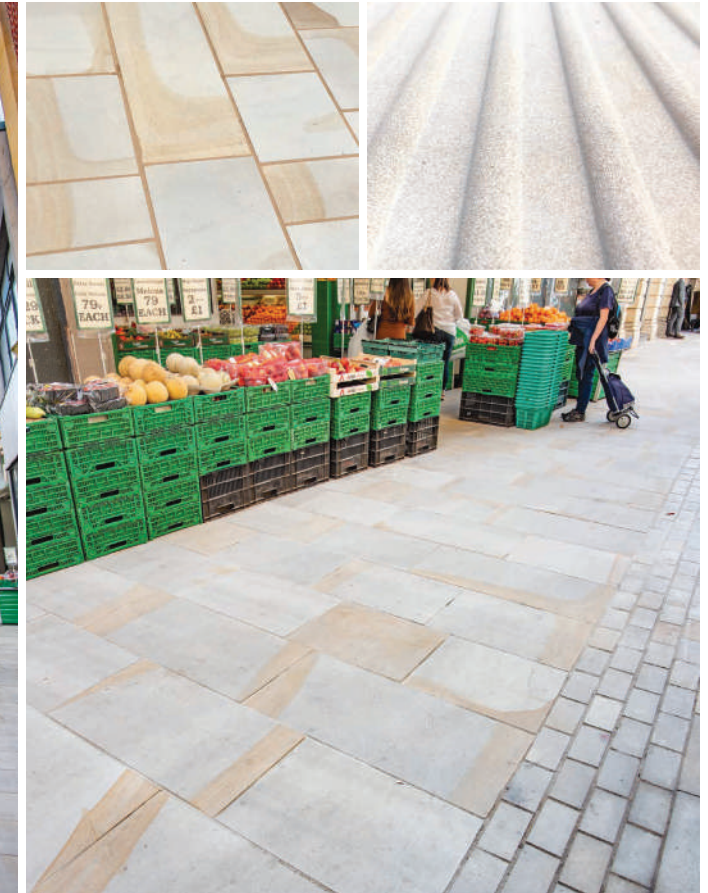

Sourced, quarried and manufactured in Derbyshire by RGB to ensure the lowest possible impact, Mouselow Yorkstone, is an attractive local sandstone with a hard, durable constitution and built-in skid resistance, making it perfect for paving, setts, kerbs and masonry products.

Mouselow Yorkstone has exceptional weathering capabilities and, because of its performance characteristics and durability, is ideal for areas with high footfall; think city centre developments, streetscapes and other public realm projects.

Thanks to the unique calibration process involved in manufacturing the stone – paving, setts and kerbs are produced to tightly-controlled tolerances, maximising efficiency on site and speed of installation for the contractor.

Thicknesses include:

- ▶ 30-40mm – (domestic pedestrian use only)
- ▶ 50mm – domestic use (pedestrian/light vehicular traffic)
- ▶ 63mm – commercial (heavy vehicular traffic)
- ▶ 75mm – commercial (heavy trafficked areas, heavy commercial and maintenance vehicles)

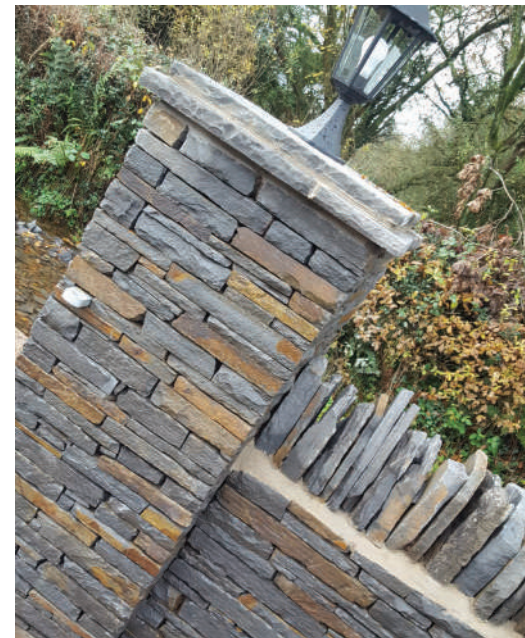

Blue Pennant

Blue Pennant stone is a lithic sandstone. Typically, it consists of 60% quartz grain, with the remainder being fragments of schist and quartzite. Here are some of its key properties:

- ▶ Blue Pennant is extremely slip resistant, even through wear, making it an excellent paving option
- ▶ Colour will vary from rich browns and ochres all the way through to cool blues and greys
- ▶ It's particularly strong and durable, being both frost and abrasion resistant

Blue Pennant paving is available as riven, diamond sawn, flamed diamond sawn and block paving, while walling can be offered as random, semi-coursed and jumpers. Finally, Blue Pennant masonry is available as copings, cills, lintels, corner stones and arches.

For more information about this sandstone and how it could feature in your next project, contact RGB Landscapes.

Bettazza Granite

Sourced exclusively from the Swiss Alps and used throughout Europe, Bettazza is a metamorphic quartzite granite ranging in colour from milk white and silver to cool grey and obsidian. It's available in a number of finishes, including smooth, split, flame textured, shot blasted and bush hammered.

Bettazza is a premium, robust granite worked to tight tolerances. It can be used for cladding from 30-250mm thick, for internal paving at 15mm thick, or external paving from 30-75mm thick.

Contact RGB Landscapes today and tell us about how you would like to use Bettazza granite in your next project.

Stone Domestic

Our riven sandstone range is unique and full of character, with its beautiful colour blends and textured veining on the surface. This collection of natural stone offers charm and a traditional look to any garden.

Limestone is a strong and hard wearing natural stone. However, unlike sandstone, it has a more delicate look due to its natural formation, making it an overall softer stone.

RGB has a reputation for quality delivery throughout the UK thanks to a strong relationship with our suppliers. Our products are certified to the highest standards and our natural stone is calibrated to ensure easy installation.

The environment is very important to us. Our natural stone is ethically sourced from India and all our products are packaged in recyclable plastic.

Natural Stone

RGB Landscapes are able to supply a wide range of natural stone for both residential and commercial customers, including granite, quartzite, porphyry and limestone. To ensure our products can be adapted to suit both contemporary and traditional design, they are available in a variety of finishes, for example: sawn, riven, flame textured, polished and honed.

We also have a large selection of natural stone imported from Europe and Asia, where they are produced in accordance with strict specifications. All of our certified production sites are regularly inspected by independent auditors too, so you can be secure in the knowledge that you have chosen a high-quality operation.

Concrete Hard Landscaping

Concrete is a simple, cost-effective material for hard landscaping and – thanks to the wide array of colours, sizes and finishes available – can be extremely versatile.

Paving

Manufactured to accurately replicate the look of natural granite, our concrete paving is suitable for a wide variety of hard landscaping applications.

We use high-quality Yorkstone, granite and limestone aggregates, so our concrete paving is extremely hard wearing and perfect for areas with high footfall.

If you want your paving to synergise aesthetically with the rest of your project, our granite-look concrete is available in a wide variety of colours and finishes, including: finely textured, lightly washed, riven, lightly embossed, ripple and ground.

Give RGB Landscapes a call today and find out how we could transform your public realm or residential project.

Block Paving

RGB Landscapes supply high-grade block paving for the commercial, residential and domestic markets.

Ensuring our products can adapt to a range of different architectural styles, we offer a number of different finishes, for example: traditional rumbled, smooth surface, granite aggregate texture, lightly textured, riven and ground.

The range includes 50mm thick offerings for residential driveways, 60mm variants for light vehicles and pedestrian traffic, and finally 80mm paving for industrial applications.

Get in touch with RGB Landscapes today and find out how our concrete hard landscaping solutions can be applied to your next project.

Kerbs

To ensure quality is consistent, RGB Landscapes' kerbs, channels and edgings are all produced in accordance with BS EN 1340. We offer a full range of accessories too, including radius kerbs, droppers, crossing kerbs, quadrants and angles.

We can supply both high-quality granite kerbs and reconstituted kerbs with a granite aggregate surface, available in various profiles including square-edged, bullnose and half batter. So, no matter what the budget or requirements of your project, our products can be adapted to fit.

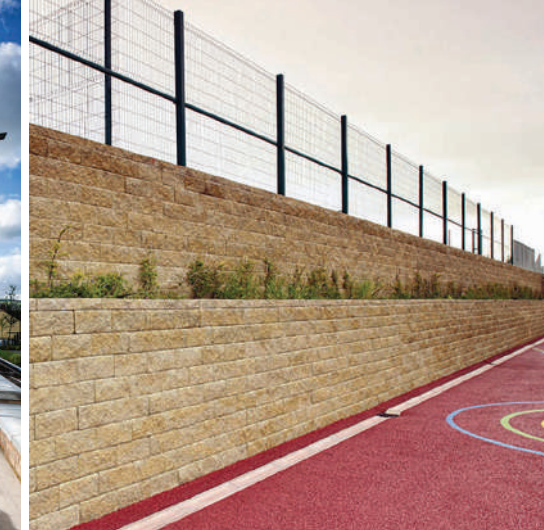

Segmental Retaining Walls

Segmental retaining walls offer significant benefits for both engineers and clients, providing a range of safe, flexible and cost-effective solutions.

For example:

- ▶ **Vertica retaining walls** are perfect for steep hillsides and other difficult installation areas
- ▶ **Bayfield retaining walls** are a versatile dry-build walling option, complete with a distressed stone face which offers a weathered, textured finish similar to natural dry stone walling
- ▶ **Diamond dry-build retaining walls**, with their mortarless and pinless design, demonstrate clear all-weather installation advantages

If you need high-quality materials for your next retaining wall project, look no further than the RGB Landscapes.

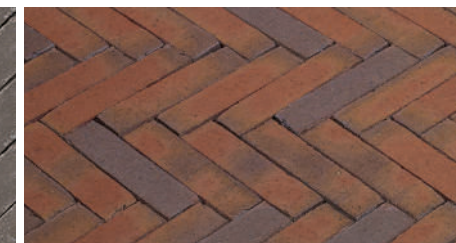

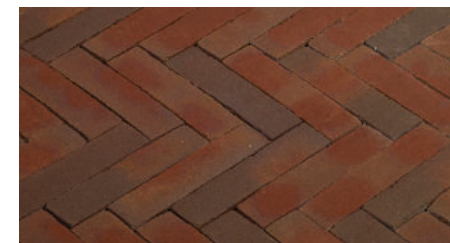

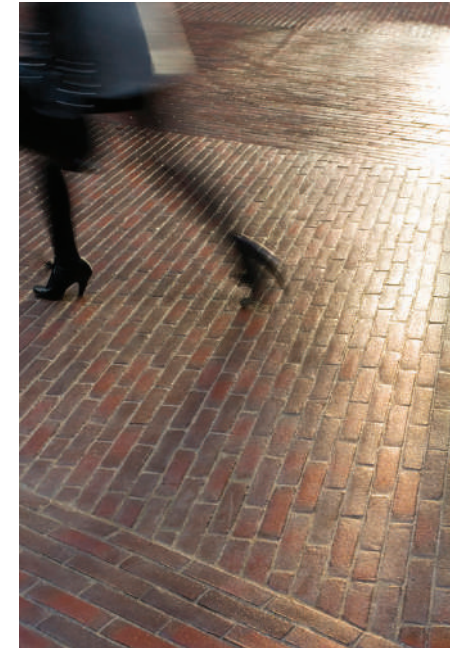

Clay Products

Clay, with its strong constitution and warm, reddish-brown hues, is an excellent material for both residential and commercial construction projects. It's the perfect solution for areas with a particularly high footfall and, once laid, remains easy to maintain.

Our clay paving range is available in a number of different styles and textures, from traditional autumnal colours to blues, blacks and greys, meaning that it can be easily adapted to suit both traditional and contemporary styles.

Contact RGB Landscapes and enquire about our range of clay products today.

Secondary Processing

RGB specialise in turning high-quality stone into precisely-manufactured architectural products for the hard landscaping market.

We can offer products such as painted blocks for demarcation, step units and visibility strips, tactile paving, corduroy paving and cycle logos. So, no matter your project, we can help with the finishing touches.

Our painted blocks are produced using a quality epoxy resin and extremely durable aggregates. They are available in four colours: black, white, yellow and reflective.

Our steps and visibility strips are milled to a specific depth and width and come in a number of finishes, including resin, carborundum and gradus.
