Solution Architect (Java, C#)

Anubex is a Belgian ICT company and technology visionary active in cross-platform migrations of large mission-critical software applications. Anubex specializes in the creation of migration and testing tools that automate the conversion or re-hosting of software applications on a variety of "legacy" platforms to open systems or mainframes. Anubex also provides migration services to its customers during migration projects and supports a growing international network of partners that accommodate their own customers with the help of our technology solutions and expertise.

To strengthen our development team in Kontich (near Antwerp), we are currently looking for a solution architect/developer.

Responsibilities:

Your role and main responsibilities include, but are not limited to, the following:

- Create and/or extend the overall migration solution design. Such design typically exists out of multiple software components including Anubex developed software and 3rd party products;
- Understand all the requirements of the migration solution and take technical responsibility for the final product;
- Create and update specifications that can be implemented by developers;
- Develop the initial version of runtime libraries and frameworks, both as a proof-of-concept and as a framework to get developers started;
- Create the basis of (automated) test suites that can be used to validate the implementation;
- Follow-up on the implementation, quality and adherence to the design;
- Ensure to keep up with technology evolution in general and specifically the set of technologies you're the architect for;
- Be the go-to-person for all questions about the set of technologies and products / solutions you're the architect for, including representing Anubex at prospects and customers for questions about these technologies and products/solutions;

In this role you work closely together with our Development Manager.

Job profile:

You are an experienced programmer with a passion for technology who likes to research, design, communicate and document software solutions.

Considered a Must:
- At least 5 years of experience in a professional developer and/or architect role;
- An analytical mind that likes to tackle problems and cannot rest until a solution is found;
- Good programming skills in Java and C (or C++);
- Good verbal and written communication skills;
- Interest to learn about and work with legacy and low-level technologies (COBOL, assembler, mainframes, 3270, …)
- Passion to learn about and keep up with the latest evolutions in technology
- Fluent in English;

Considered a Plus:
- Experience in designing and maintaining software products/solutions end-to-end (from requirements to production);
- Experience in working on migration solutions and projects;
- Communication skills in Dutch;

What we offer:

- A positive atmosphere in an international company with a growing partner ecosystem;
- A dynamic team having a pool of expertise and references in legacy system migrations;
- The ability to keep your knowledge up-to-date and learn new technologies;
- A high degree of flexibility including flexible hours, home office, extra leave, career planning;
- A competitive salary completed by additional benefits such as company car or bicycle, group insurance, medical insurance, meal vouchers, laptop.
