

FACT SHEET

Sohar Port provides convenient access to the world's trade routes, bridging East and West

Location
Sohar Oman

Established
in 2014

Employees
180

Vision

To be the leading responsible producer of antimony in the world, while supporting the goals of the mineral processing sector of Oman.

Mission

SPMP has one mission: To positively advance and impact the global antimony industry, providing diversity of choice and operating with the highest safety and environmental standards from sourcing to disposal. The SPMP team services this mission by fostering innovation using advanced technology to produce on spec products, leveraging Oman's strategic geographical location and creating a legacy for the communities we serve in.

PRODUCTS TYPES

Antimony Metal

Antimony is considered a minor, critical and strategic metal and is widely used in the plastics industry as a flame-retardant material.

Gold Doré

SPMP's Doré is a Cu-Au alloy bar, typically with a high gold content resulting from the removal of metallic and non-metallic impurities. These bars require further refinement before the metal can be used as raw material for producing gold items.

Gypsum

This material is a by-product generated from the desulfurisation of flue gases produced during the conversion of antimony ore to metal. Widely used in the manufacturing of gypsum panel products, cements, wallboards, and glass, it promotes sustainability and is ecologically beneficial.

MILESTONES

2012

Concept of an eco-friendly metal smelter is born

2014

Founded

2017

Plant construction begins

2019

Production of our first on spec antimony
Sale of our first batch of gold doré

2020

Refinancing and capital restructure complete

KEY NUMBERS

20,000 tonnes
of antimony products
per annum

15%
of the world's antimony
production per annum

50,000 ounces
of gold production
per annum

#1 Oman's first
antimony and only
gold doré exporter
