Open Raven Managed Service

## Our Experts. Your Team. One Goal.

Keeping pace with the variation, velocity and volume of data at cloud scale is a challenge for any security team, so why not add some expert hands and guidance? **The Open Raven Managed Service** is designed to empower organizations to quickly, effectively, and continuously secure their cloud data.

> "Our team needed more than native utilities and open source tools to quickly and consistently protect sensitive data in our complex cloud deployments. With Open Raven, we will be able to augment our team, accelerate data discovery and security, and improve data governance in a consistent and prescribed manner."
>

## Integration and Customization

From setup and implementation, to use case operationalization and baseline integration with alerting and reporting services, our experts will work with your team to understand your environment and processes and accelerate your journey to greater data security, visibility and control.

Expert Analysis and Training

Our team will provide expert insights into scan results, policy violations, and trends as well as support improving incident response including workflows and playbooks. Private training and workshops are tailored to these findings for an ongoing transfer of knowledge, ensuring maximum benefit for the life of the service.

Executive Reporting on Risk and Posture

We will help design and streamline your reporting needs to make communication of data security risk and posture easy and clear. From dashboards for day-to-day activities to quarterly reports to regulatory-specific requests, our team will make sure you have what you need.

Key Benefits

Accelerated Configuration
Our experts will have the basic functions and workflows setup with ease so your team benefits from the platform quickly and easily.

Tailored Trainings and Workshops
Regular training sessions and workshops specific to your team and environment for faster and more effective onboarding and continued improvement.

Classification Tuning
Includes configuring and reviewing data scan performance in general and for accurate identification of custom classes.

Violation and Alert Tuning
Our team of security professionals will assist in configuring rules and policies so they meet your needs; better signal, less noise.

System Health Monitoring Guidance
Ensures the platform and integration into your environment is healthy, and one less thing your team has to monitor.
