

Getting started with projections

Hanging your projector to get the right size image

We recommend front projection and hanging your projector from a light bar in all instances. When you are unable to hang your projector, building a platform in front of the projector for the action to take place will solve the vertical shift. Ask our production experts for details.

Image size		Distance from Surface (ft)	
Width (ft)	Height (ft)	.24 throw (economy only)	.35 throw (all other models)
20	11.25	5	7
30	16.75	7.5	10.5
40	22.5	Not recommended	14
50	28.1	Not recommended	17.5

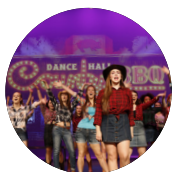

Project digital scenery with no shadows.

Action should take place no less than 5ft downstage* from the projection surface to avoid shadows.

*General rule only: Subject to projector positioning.

Projector Brightness

“Lumens” equal brightness! The higher the lumen count the brighter the image.

TOP TIPS FOR MAXIMIZING PROJECTION BRIGHTNESS

1. Adjust your stage lighting downstage from the projection surface
2. Utilize side lighting and downstage spill, avoid light bounce from the projection surface
3. Lower the brightness of your stage lights, use blue and purple hues, and use spotlights to track movement and action.
4. When beginning a scene, first establish projections to the audience, waiting 2-3 seconds and have your lights warm up to full.
