

Desk booking

Book a workspace quickly and easily

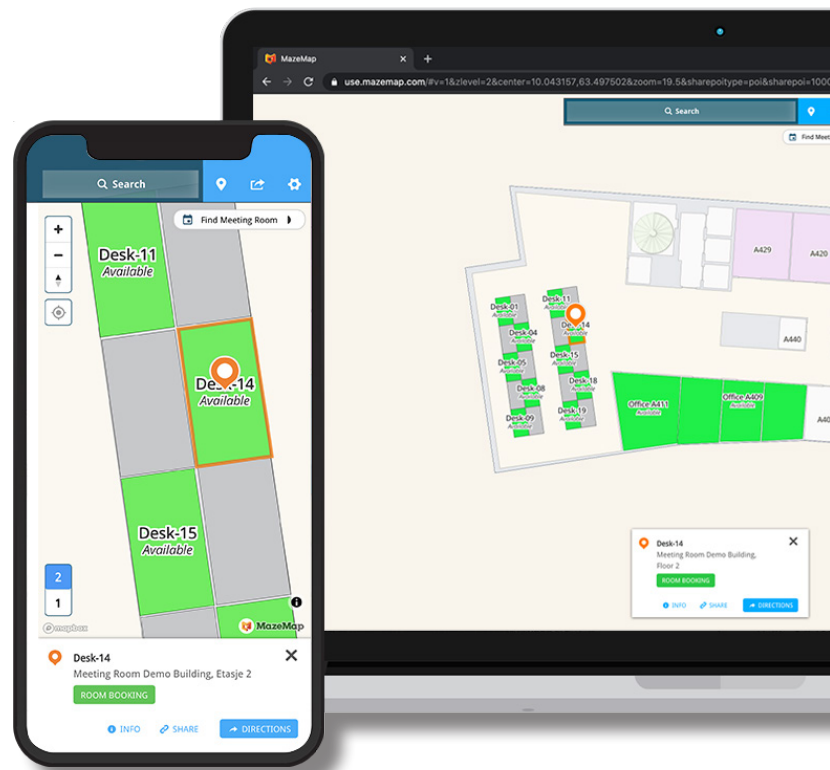

Find a free desk space

With MazeMap's desk booking tool, you can use indoor positioning to locate the closest available desk space. See available desks in an interactive and user-friendly format, with an intuitive color-coding system letting you know which ones are booked and which ones are available.

Book desks in one click

Our one-click booking function takes the stress out of securing a meeting room. What's more, we can integrate with your Google or Outlook calendar or your university timetabling system. You'll see a URL appear in your schedule, which will give you directions to the room. You can use the map on mobile, tablet, or computer and it doesn't require an app. We combine indoor and outdoor directions too, so you can navigate seamlessly between buildings or even from your home to your required destination.

Save time

MazeMap's desk booking feature buys your students or staff more time in their day. Instead of wandering around the university campus or office building looking for a place to work, MazeMap can help them navigate to where they need to be fast.

If you'd like to discuss how MazeMap can help you, get in touch for a non-committal chat.
