

## Find Doctors and Nurses When You Need Them Most

MazeMap has developed a service allowing you to see in real-time where doctors and nurses are located within the hospital.

In times when it can be difficult to locate the nearest doctor, nurse or specialized nurse, this service can give other staff members an overview. It ultimately helps them to find the resources they desperately need, quickly and efficiently.

When starting their shift, all staff need to do is enable their location visibility\*. Once they leave the hospital building, or if they choose to turn their location off, they will no longer appear on the map.

MazeMap's Find My Friends service is interactive, intuitive and easy-to-use. It can be integrated into a web app, mobile app or website, giving you greater flexibility with how you choose to use it.
