

Find ideal research groups & experts

Discover rising star groups, established thought leaders, academic experts, and pharma competitors currently active in your global R&D ecosystem.

Top KOLs are widely known. However, it becomes challenging to identify those up and coming scientists with strong ties to KOLs.

It is even more difficult to identify KOLs who have previously collaborated with companies or created a promising spin-off to keep an eye on.

Furthermore, it is crucial to identify the competitors that are focused on your scientific topic of interest.

AcademicLabs enables you to do all this in one unified platform.

“So many insights that I didn’t know before as the data is simply not transparently available elsewhere.”

Proactively recognise rising stars before anyone else does

With 1 click, identify up-and-coming groups and researchers who published recently, have been cited heavily in your topic and started their own group, formed a spinoff or created a startup in the last months.

Connect with these groups directly via AcademicLabs and get a guaranteed higher response rate than with top KOLs.

"Better than PubMed and Google to find out who is working on the same thing and what is out there. I found out so many scientific insights that I didn't know before."

All it takes is a few clicks to find KOLs with industry collaboration experience

Evaluate potential collaborations with academic experts by finding the ones who already worked with companies before.

We built a powerful filter to help you identify industry-academia partnerships with just 1 click.

You can also easily view which companies (and competitors) these experts have been working with.

"I really enjoy using AcademicLabs. It has been extremely useful in finding opportunities and our experience is far superior to other database companies that we have previously used.

The filters and analytics are so easy to use, precise and brings back exactly what you are looking for."

Lightning fast Competitive Analysis

Analyse your competitive landscape or find biotech companies based on their scientific activities, track record and collaborations. All in one place and easy to use.

Examples of instant insights about your competitors:

- Which companies are currently most active, have most patents, publications, grants or clinical trials on your topic?
- Which academics and institutions are your competitors collaborating with?
- What have they published and patented recently on your topic of interest?
- What public grants have they won recently and who are their partners?

"You can do so much with it that one just needs to spend more time on it. This already gives so many different options of what you can do. A very flexible and versatile platform!"

Directly get in touch with any lab's leader

First, evaluate in-depth a group or researcher's scientific activities with a few clicks.

Next, leverage the available information to write an effective personal email directly from AcademicLabs.

The professor's reply will be delivered directly to your inbox, and all your communications will be encrypted and GDPR compliant.

"I am using the tool very frequently and getting a lot of connections in academia."
