

LUCH

*A fully automated data transfer system
Instantly available snapshot of each event
Integrated advanced visualisation tools*

Flight Data Monitoring/Analysis

Designed to decode and analyze parametric information registered by

Flight Data Recorders

Information of voice recorders can be used jointly with the information of parametric recorders.

**Comply with
ARINC-429/542A/573/575/747/717
STD1553
ICAO DOC9859 AN/474**

Visual presentation of charts with large variation of flight parameters

The analysis of flight performance, represented in 3D

Synchronization of speech information

Visualization of movement aircraft trajectory with indication of parameters of flight in any point of the trajectory on elements of the instrument panel

Fuel Consumption Optimization Analysis provides 5 % fuel savings per flight
Built-in airport database, detailing international airports, runways
Engine monitoring
