UiPath Certified
PROFESSIONAL SERVICES

Better together:
Baker Tilly & Alirrium

Is your Costpoint team *stuck* on the digital assembly line?

Free them today with Robotic Process Automation (RPA)

Baker Tilly's strategic alliance with Alirrium brings the power of market-leader UiPath to provide RPA to government contractors. Our alliance allows us to **streamline** your existing processes and **unleash** the innovation, creativity and passion of your people.

What is RPA?

RPA is a software technology that performs transactional activities in IT applications, including the Deltek Costpoint suite, the same way a human user would.

Solving business challenges

Improved customer experience: Streamline customer facing processes and allocate more time to direct customer-facing activities

Hyper-automation: Design, build, test and deploy complex business processes in weeks, driving unprecedented time to value

Improved employee engagement: Leave the mundane, repetitive and laborious tasks to the bots and free up employees to focus on more engaging work

Marketplace benefits of the Baker Tilly & Alirrium strategic alliance

– **Access to exclusive RPA software bundles and starter packages built for Deltek Costpoint**
– Joint collaboration and development of innovative RPA solutions for automating processes within and across Deltek's platforms, as well as in-between Deltek and third party applications
– A library of pre-built "micro-bots" available to support every aspect of your business processes
– RPA community blog created exclusively for Deltek customers developing on the UiPath platform

Workforce 3.0

Incorporating RPA "bots" to work hand-in-hand with humans.

"RPA will help our customers do more with the same, or less, resources and will raise employee satisfaction by giving the bots routine repeatable tasks so that employees can focus on more important work for their companies and their careers. RPA is a great complement to Deltek's solution."

– Warren Linscott
   SVP of Product Strategy at Deltek

Automatable RPA processes

Streamline back office processes, like contract set-up, AP transaction processing, customer billing and more

Support your digital transformation strategy

Collect and move structured and unstructured data from any source

Enhance data compliance and security

Accounting

- Automating complex journal entries
- Performing and documenting account reconciliations
- Calculating and applying allocations
- Validating and reconciling data from multiple sources

Financial planning & analysis

- Consolidating and validating budget and forecast inputs
- Flagging projects that may run over budget
- Gathering and cleaning data for analysis

Contracts and billing

- Improving contract set-up speed and accuracy
- Submitting invoices and receiving reports real-time with iRAPT
- Automating billing workflows and approvals

Accounts payable

- Performing 2- and/or 3-way invoice matches
- Processing expense-approval requests
- Automating invoice intake and processing
- Automating subcontractor-related invoicing and reconciliation

Accounts receivable

- Generating and validating invoices
- Automating cash applications
- Analyzing and processing disputes

Do you want to automate your Costpoint processes?
