# OUTSOURCE TO
INCREASE PRODUCTIVITY

ENGAGE IN PROACTIVE SUPPLIES AND SERVICE PROGRAMMES.

Automated device and maintenance alerts notify your service partner as soon as devices require supplies or service. Without your staff having to take action, an appropriate remedy is put in place. This will increase device uptime, reduce inventory for consumables, and free time for your staff to spend on your core business. Status alerts, maintenance scheduling and scheduled reports keep you informed of when devices require supplies or service. Increase device uptime, reduce inventory and improve your first-call success rate.

REDUCE THE BURDEN ON YOUR STAFF.

KYOfleetmanager allows your service partner to manage and maintain your output environment remotely, without any interruption to your day-to-day business. As devices from all manufacturers are supported, you now need only one contact for all services and supplies. Create preformatted, customised and bundled reports. Reports can be sent automatically to e-mail recipients on a predetermined basis, or can be downloaded in PDF format from the web interface.

PROFIT FROM SOFTWARE AS A SERVICE.

▶ No investment in servers and maintenance
▶ No internal administration and management
▶ All costs are transparent and predictable
▶ Reliable and secure application
▶ Flexibility and scalability
