

Desktop as a Service (DaaS)

Use Cases in the Healthcare Industry

Use Case: Ubiquitous access for emergency care workers

The Business Need

Emergency healthcare practitioners are at the frontline of care delivery. They respond to emergencies at odd hours and are likely to move around and access different departments and facilities at different times. They access patient Electronic Health Records (EHRs) and data from Health Information Exchange (HIE) systems many times a day from terminals placed at separate points across facilities. In the process, they waste much time logging in afresh each time to access these applications, potentially delaying lifesaving treatments.

DesktopReady Advantage

A virtualized desktop can save practitioners the time and effort associated with repetitive login for critical applications. With DesktopReady, practitioners can transition seamlessly from a workstation to a desktop, laptop, terminal, or mobile device. The enhanced agility allows an emergency responder to input critical patient data and medical imagery anytime, anywhere, while a specialist can review it on their mobile device and prepare an appropriate course of treatment, improving the patient's treatment/recovery process.

Benefits

- Improvement in emergency response times
- Improvement in patient recovery and survival rates
- Convenience of device mobility and anytime, anywhere access
- Improvement in physician productivity due to quicker system start-up

About DesktopReady

DesktopReady is a modern fully managed Desktop as a Service (DaaS) with built-in automation and monitoring that simplifies the delivery and management of cloud desktops for the unique needs of companies that want to spend less time on IT. Developed using Windows Virtual Desktop (WVD) infrastructure within the Microsoft Azure cloud, DesktopReady provides fully functional Windows 10 desktops that are easy to install, configure and ready within minutes. The highly secure cloud desktops are built on platforms that are PCI, HIPAA and SOC2 compliant and supported by 24/7 service desk and infrastructure monitoring.
