

Desktop as a Service (DaaS)

Use Cases in the Healthcare Industry

Use Case: Single pane of view for legacy systems and new platforms

The Business Need

Digital transformation is key for patient-centric care delivery, and it has been experiencing accelerated investments in the healthcare industry due to rising consumerization, focus on Value-based Care (VBC) systems, and increase in compliance, regulations, and security. Players in the ecosystem have started adopting newer platforms deploying automation, analytics, IoT, mobility, and the cloud to improve operations.

However, legacy systems are still used extensively at many stages along the provider and payer value chain. With an increase in the number of discrete systems in daily work, user groups are at risk of digital fatigue, which could, in turn, tarnish the potential upside of deploying new technology.

DesktopReady Advantage

DesktopReady provides a unifying platform that delivers consistent experiences to practitioners using both legacy systems and digital applications. With secure, reliable, and high-availability access to the entire spectrum of applications on the same device, users are spared the hassle of constantly switching workstations.

Centralized device management allows remote patching, updates, and access control, thereby greatly reducing IT overheads in this regard.

Benefits

- Improved security with continuous compliance across end-user devices
- Single pane-of-view into all workspace applications
- Better value realization from investments made on legacy platforms

About DesktopReady

DesktopReady is a modern fully managed Desktop as a Service (DaaS) with built-in automation and monitoring that simplifies the delivery and management of cloud desktops for the unique needs of companies that want to spend less time on IT. Developed using Windows Virtual Desktop (WVD) infrastructure within the Microsoft Azure cloud, DesktopReady provides fully functional Windows 10 desktops that are easy to install, configure and ready within minutes. The highly secure cloud desktops are built on platforms that are PCI, HIPAA and SOC2 compliant and supported by 24/7 service desk and infrastructure monitoring.
