

Thank you for attending the State of the Science Meeting

Common Themes

1. Reset expectations about return to work
2. More treatment arms can identify impact of specific intervention components
3. New data matches, qualitative data, and implementation measures can go beyond the impact analyses
4. Different populations have different needs; targeting can be challenging, but also more effective
5. Importance of ensuring a diverse set of stakeholders, researchers, and participants in the demonstrations

Volume to come

An accompanying volume with edited papers and discussant comments to provide an ongoing resource for next steps

Future demonstrations can provide evidence about whether policies have the intended effects and help to ensure that ineffective or harmful interventions do not become permanent
