**Thursday, October 28, 10 am CST/ 11 am EST**

### **We all have stories to tell: Case Study Research for Chaplains**

Jeanne Wirpsa, Northwestern Memorial Hospital and Cate Michelle Desjardins, Mennonite Healthcare Fellowship

Case studies have been an important part of the research agenda in chaplaincy since 2011. Case studies serve as an important resource for education of new chaplains and for our non-chaplain colleagues. They provide insight into how chaplains assess spiritual and religious needs of patients and families, make decisions about appropriate interventions, and show how outcomes directly connect to and result from the chaplain's care. More recently, our profession has utilized methods from social science research to compare multiple cases and generate hypotheses for both qualitative and quantitative research. If you are interested in writing your own case study, culling the current body of cases for insights into best practices in chaplaincy care, or just want to expand your awareness of chaplaincy research methods, this webinar is for you!

**Friday, October 29, noon CST/1pm EST**

### **Patients' and Loved Ones' Expectations of Chaplain Services**

Beth Muehlhausen, Ascension

In this study of 452 patients and family members in 16 Ascension hospitals in Indiana investigators found that 93% of the patients and families wanted at least one chaplain visit while they were in the hospital. Among those with no religious preference, 83% still said they wanted at least one chaplain visit. Of the 230 (59%) participants who had already received a chaplain visit, 88% reported that the visit was either very or somewhat important to them.
