# AggLink

Linking you to your plant.

AggLink data services take the complexity out of monitoring and reporting critical plant data. Inventory and production reports can be generated with a click of the mouse, or swipe of the finger, from virtually anywhere in the world. No longer does it require dedicated PC's, complicated data connections or dedicated IT staff. From a simple portable plant to multiple locations spread across the globe, AggLink can connect to them all and bring the data into one easy to manage portal.

Reporting can be as simple as a daily text message or a packet of reports emailed to multiple addresses. Up to the minute data can be accessed instantly from virtually any device. Even a simple telephone can call in for a automated voice report.

Almost any type of Internet connection can be supported. If one is not available AggLink can provide cellular data service plans.

Features/Benefits

- Remote reporting and monitoring.
- No PC or database to manage.
