

Client Driven Process

1

Project Discovery Intake

A free service where we provide an in-depth review of your vehicle and have a detailed discussion with you to define the various directions your project could go.

2

Project Feasibility

A free service where we provide multiple scenarios based on your desired outcome for your vehicle. This includes a detailed costs analysis with a divisional breakdown of estimated costs for our review together.

3

Project Planning

A paid service to thoroughly build project scopes of work for every component of your project. Upon your review and your approval of each scope, we will obtain quotes to build a defined budget and defined schedule to give you exactly what you want in your vehicle.

4

Restoration

Upon completing the project planning phase of your vehicle to a tee, together we now know exactly what you want, which parts, which materials, which suppliers, which vendors, and which trade partners will be used. The vehicle budget and schedule have been defined. Now we get to work building your dream car without surprises, without grey areas and without frustration.

5

Client Care

At this point you are enjoying what you have built, and we want to ensure your investment is well cared for. We have a comprehensive service schedule to ensure that your new car impresses you every time you take her for a spin.

THE PERFECT
CAR BUILDING
EXPERIENCE
