About Us

Move! AI delivers human-like precision and movements to robots; combining sensor fusion, vision and machine learning & artificial intelligence technologies. Saving a lot of your precious time and money.

Robust

Uses computer vision to understand 3D surroundings, enabling robots to reliably run in complex environments.

Accuracy

AI-enabled technology delivers performance in terms of localization and navigation at par human level.

Hardware agnostic

Use Seirios on any device. No additional hardware required.

Onboard computation

The software is running onboard of the robot, eliminating any risk of latency.

Reduce cost

Sensor fusion, algorithm enabled high accuracy navigation system at a lower cost.

Save time

Cut down on deployment time and deployment process by providing a ready to use solution.

Versatile

Use Seirios on any robots of any shapes and sizes*.

Seirios

Bringing intelligence to robots through a smart navigation solution

Seirios RNS

Uses computer vision to understand 3D surroundings, enabling robots to reliably run in complex environments.

- | Mapping
- | Path Recording
- | Teleoperation
- | Coverage Planner
- | Localisation
- | Single point Navigation
- | Task Manager
- | Multi point Navigation

Seirios Simple

Seirios simple with an easy user interface enables everyone, even with no technical skill to navigate and control robots within a few clicks.

- | Manual Controls
- | Instant Task Execution
- | Queueing & Scheduling

Seirios FMS

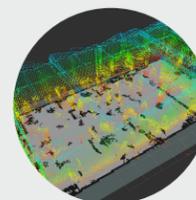

In large, busy and dynamic environments, multiple robots may be required to get tasks done. With a fleet management system (FMS), multiple robots can be viewed and managed simultaneously.

- | Lane Management
- | Task Delegation
- | Robot Management

Feature Recognition

Extracts prominent feature points from robot's camera view, shown as green circles. All these feature points are stored in a 3D map.

Semantic Understanding

Human & object detection and recognition of objects (type, size and shape)

Software Requirements

A PC with i5 processor (or 2-core, 4 threads CPU @ 2.4 GHz minimum)

8GB DDR4 RAM

127GB Solid State Drive (SSD)

Ubuntu 20.04 operating system

Internet connectivity (WiFi dongle or embedded WiFi antenna)

Licensing

	Base Price	License Price / Robot
Seirios RNS	-	SGD\$ 3.000
Seirios Simple**	-	SGD\$ 500
Seirios FMS**	SGD\$ 10.000	SGD\$ 1.000

**Pre-requisite- SeiriOS RNS

Easy integration from web based system

Sleek User Interface
