

Côte Ouest Audiovisual from Ivory Coast chooses EVRIDEO for Cloud-based programing & playout for their Nina TV channels

Aiming to increase efficiency, Côte Ouest Audiovisual has embraced cloud technology and transferred its European and African- French and English feeds of Nina TV channels to the EVRIDEO next-gen cloud-based programing and playout platform.

“We were searching for a state of the art and easy to operate technology that would ease our daily operation of managing multiple feeds and expedite our distribution over the region” said Côte Ouest Audiovisual Chief Executive Officer Mr. Bernard Azria. “By moving the two NINA TV channels to the EVRIDEO platforms we were able to consolidate all content and channel management on a single cloud based platform and quickly deliver the feeds to existing and new customers over IP and Satellite.
