

Guardrails

Safety guardrail systems are used at the perimeter edge of a roof to protect personnel working within a fall zone. Ideal for isolated locations of fall hazard such as a single mechanical unit at the edge of the building.

WorkSafeBC prefers passive fall protection systems as no training is required and there is no additional equipment such as ropes & harnesses to get tangled in.

Guardrail for unprotected edge

- 42" high, one horizontal mid bar
- Steel SQ tube construction.
- Steel pipe construction.
- Hot dip galvanized

Material	Steel ASTM A500
Guardrail	1 1/2" 0.125 wall tube
Brackets	1/4" flat bar

Dimensions	H	42" installed
